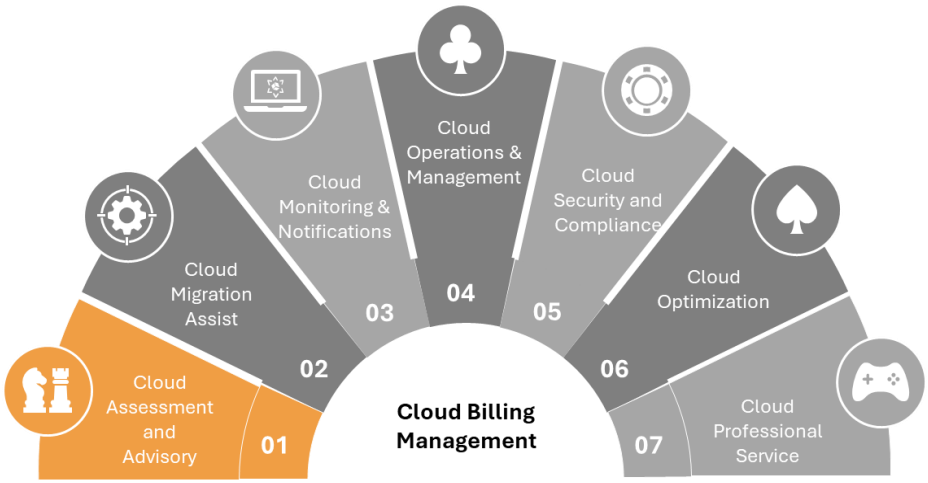
7. About Yntraa Cloud 11

1. Cloud Assure

Cloud Assure is our comprehensive cloud management offering, built on seven distinct service pillars that collectively support every phase of the cloud journey—from initial assessment and migration to ongoing operations, optimization, compliance, and continuous improvement.

This document focuses on the first pillar, Cloud Assessment and Advisory, which sets the strategic foundation for successful cloud adoption. It offers in-depth evaluations, readiness analysis, and expert guidance to help organizations plan and align their cloud journey effectively.



2. Cloud Assessment and Advisory Service

Cloud Assessment and Advisory Service helps organizations evaluate their current infrastructure landscape and define a clear, achievable path to the cloud. The service begins with a structured assessment of your existing infrastructure, applications, and business objectives to determine readiness for cloud adoption or migration.

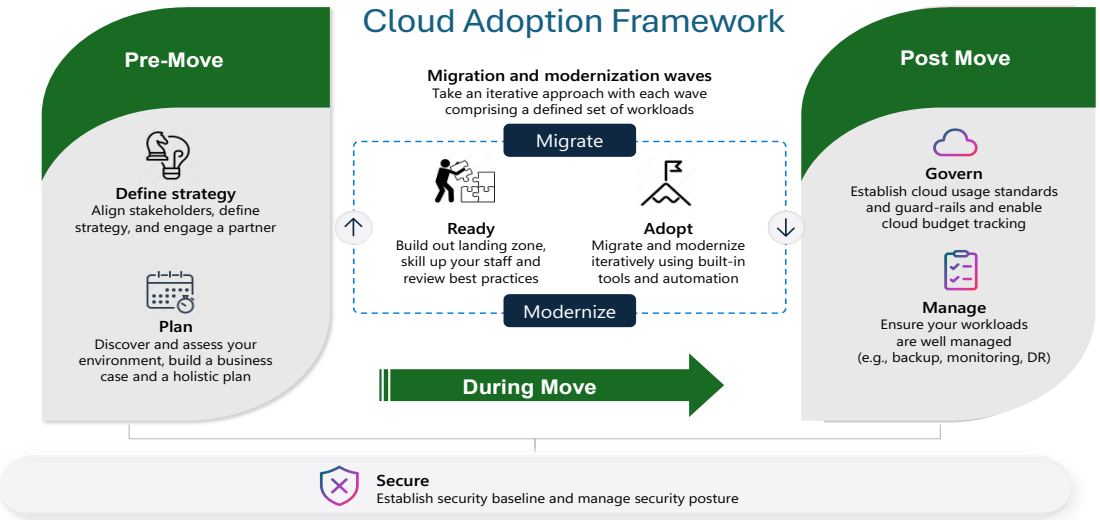
Our experts analyze capability gaps, risks, and opportunities and provide tailored recommendations to align your cloud strategy with broader business goals. This includes selecting the appropriate cloud platforms, defining target operating models, optimizing cost structures, addressing compliance and security requirements, and planning phased workload migrations. The result is a comprehensive, prioritized cloud adoption roadmap that not only assesses feasibility but also outlines the specific steps required for a successful and secure transition, ensuring your cloud journey is aligned, informed, and execution ready.

Cloud Adoption Framework (CAF)

Cloud Adoption Framework provides a structured, step-by-step methodology to guide organizations through successful cloud transformation. Built on industry best practices, it ensures that cloud adoption efforts are aligned with business objectives, operational capabilities, and compliance needs.

We align with a structured **Cloud Adoption Framework** that supports the complete lifecycle of cloud transformation, spanning from initial assessment to governance and management of workloads. However, within the scope of this service, our focus is strictly on the **Pre-Move** phase.

This phase includes the **Define Strategy** and **Plan** stages, where we help organizations evaluate their current IT environment, assess cloud readiness, identify dependencies, and define a strategic roadmap for cloud adoption. The migration, modernization, or post-move management activities are covered under Migration Assist.



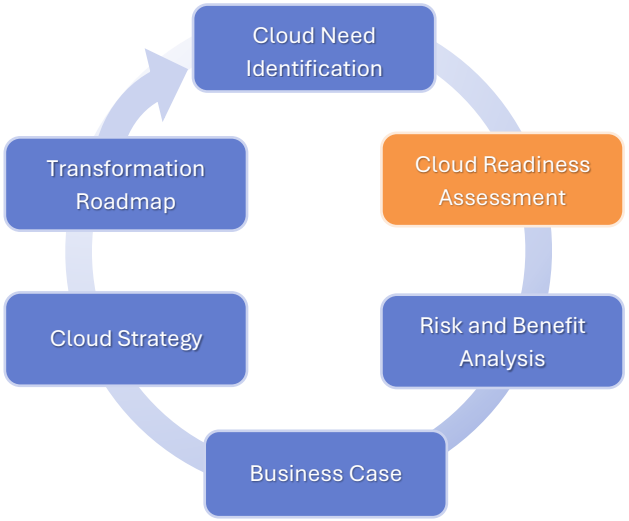
By focusing exclusively on the Pre-Move phase, we ensure that all decisions are data-driven, risk-aware, and aligned with long-term business and technical goals, establishing a strong foundation for the later phases of cloud adoption.

- **Define Strategy:** Identify business goals, drivers, and expected outcomes for cloud adoption. Align cloud vision with leadership priorities and define success metrics.
- **Plan:** Create a detailed cloud adoption roadmap and assess technical readiness, prioritize workloads, evaluate risks, and outline dependencies.

3. Approach

1. Cloud Assessment

To execute the Pre-move phase effectively, our Cloud Readiness Assessment follows a structured approach, ensuring that recommendations are data-driven, actionable, and aligned with business objectives.



While the primary emphasis is on evaluating cloud readiness, the assessment also touches upon critical inputs from adjacent stages such as business drivers, risk factors, and strategic alignment, ensuring a well-rounded foundation for decision-making.

Cloud Readiness Assessment

1. Current State Analysis

A comprehensive review of the organization's existing IT landscape to establish a factual baseline for cloud readiness and future-state planning. This includes:

- **Infrastructure**: Detailed inventory and utilization of infra-assets. Assessment of scalability, virtualization, performance, and hardware lifecycle status.
- **Applications**: Mapping of applications, interdependencies, user base, and usage patterns. Evaluation of architecture types (monolithic vs. distributed), integration points, and legacy components.
- **Data**: Classification of data based on volume, sensitivity, business criticality, and compliance requirements. Includes data residency considerations and current storage architecture.
- **Processes**: Assessment of current IT operational processes, deployment models, automation maturity (CI/CD), release management, and alignment with ITIL practices.
- **Tooling and Platforms:** Review of monitoring, configuration management, and platform tools currently in use to support operations and deployments.

This analysis provides the foundation for identifying modernization opportunities, estimating migration complexity, and establishing dependencies that may impact cloud transformation planning.

2. Organizational Readiness

An evaluation of the organization's people, culture, and governance posture to determine its preparedness for adopting and sustaining cloud transformation initiatives. This includes:

- **People and Skills**: Assessment of current cloud knowledge, technical expertise, and skill gaps across IT, security, operations, and development teams. Identification of training needs or capacity-building requirements to support cloud adoption.
- **Culture and Change Readiness**: Evaluation of the organization's openness to change, agility in adopting new technologies, and alignment of leadership and business units around digital transformation objectives. Includes assessment of stakeholder buy-in and change management maturity.
- **Governance and Controls**: Review of existing IT policies, approval workflows, procurement processes, and compliance enforcement mechanisms. Identification of areas that require modernization or alignment with cloud-native governance models (e.g., FinOps, CloudOps, DevSecOps).

This readiness evaluation enables organizations to anticipate resistance, close skill gaps, and implement the right people, processes, and structures to ensure long-term success in the cloud.

3. **Workload Suitability**

An assessment to classify workloads based on their technical feasibility, complexity, and alignment with cloud adoption strategies. This helps in identifying the right migration approach for each workload.

- **Classification of workloads as:**
  Each workload is evaluated and categorized into one of the following:
  - **Cloud-ready**: Suitable for direct migration using lift-and-shift with minimal or no changes.
  - **Cloud-friendly**: Requires moderate changes such as re-platforming or partial refactoring to leverage cloud-native benefits.
  - **Not suitable for cloud**: Workloads that are tightly coupled with legacy infrastructure, have regulatory or latency constraints, or are better retained on-premises.
- **Assessment Criteria:**
  Classification is based on factors such as architecture, dependencies, performance requirements, integration complexity, security considerations, and business criticality.
- **Migration Suitability Matrix:**
  A visual mapping of workloads against readiness, effort, and impact to support prioritization and phased migration planning.

This evaluation ensures a structured, risk-aware approach to workload migration, enabling efficient planning, resource allocation, and transformation sequencing.

4. **Security & Compliance Evaluation**

An in-depth review of the organization's security posture and compliance readiness to ensure that cloud adoption aligns with regulatory, privacy, and data protection requirements.

- **Regulatory Landscape**
  Identification of applicable compliance frameworks such as GDPR, HIPAA, ISO 27001, or industry-specific standards. Assessment of the organization's current compliance alignment and potential gaps when moving to the cloud.
- **Identity and Access Management (IAM)**
  Review of existing IAM practices, including user provisioning, privilege management, single sign-on (SSO), multi-factor authentication (MFA), and access auditing. Evaluation of readiness for cloud-native IAM controls.
- **Data Security Controls**
  Evaluation of encryption mechanisms for data at rest and in transit, backup policies, data retention practices, and business continuity measures. Identification of risks related to data leaks, unauthorized access, or data loss.
- **Data Residency and Sovereignty**
  Assessment of where critical data is stored and processed, and whether it aligns with jurisdictional, legal, and contractual obligations.

This evaluation helps organizations proactively address risks, design security-first cloud architectures, and maintain compliance throughout the cloud journey.

5. **Cost-Benefit and ROI Analysis**

A financial evaluation designed to provide clarity on the economic impact of cloud adoption, supporting business case development and informed decision-making.

- **TCO Comparison (Current vs. Cloud)**:
  Detailed analysis of Total Cost of Ownership (TCO), comparing existing on-premises or legacy infrastructure costs with projected cloud costs. This includes compute, storage, networking, operations, support, and maintenance.
- **Licensing and Subscription Model Evaluation**:
  Assessment of current software licensing, support contracts, and subscription models. Identification of optimization opportunities in the cloud, such as pay-as-you-go, reserved instances, or bring-your-own-license (BYOL) models.
- **Potential Cost Savings and Efficiency Gains**:
  Estimation of savings achievable through resource consolidation, automation, reduced hardware dependency, and operational efficiency. Highlights value-added benefits such as scalability, flexibility, and reduced time-to-market.

This financial analysis enables stakeholders to weigh the economic viability of cloud transformation, quantify ROI, and justify investments with data-backed projections.

6. **Cloud Strategy & Roadmap**

A strategic blueprint that defines the optimal cloud adoption path tailored to the organization's business goals, technical environment, and operational maturity.

- **Recommendation of Cloud Deployment Model**:
  Selection of the most suitable model, Public, Private, Hybrid, or Multi-cloud, based on workload characteristics, compliance needs, scalability requirements, and integration dependencies.
- **Migration Strategy Definition**:
  Proposed approach for moving workloads to the cloud using models such as:
  - Lift-and-shift: Minimal change, rapid migration
  - Re-platform: Moderate changes to leverage managed services
  - Re-architect: Redesign for cloud-native capabilities

  Strategy is mapped to workload classifications, business priorities, and transformation goals.
- **Prioritized Roadmap**:

  A phased transformation roadmap outlining:
  - Key migration waves or pilot projects
  - Milestones, timelines, and sequencing
  - Modernization stages and dependencies
  - Change management considerations

This strategic roadmap provides clear direction for cloud transformation, enabling organizations to move forward with confidence, alignment, and clarity of execution.

Note: Solution /scope/deliverables will vary depending on customer requirements.

2. Cloud Advisory

This Cloud Advisory engagement covers strategic consulting aligned to the Define Strategy and Plan phases of the Cloud Adoption Framework (CAF).

Advisory Stage	Description	Resource Type	Estimated Hours
Stakeholder Interviews & Discovery	Understand business goals, challenges, cloud drivers, and success criteria	Cloud Consultant	12 hours
Current State Assessment	Analyze infrastructure, applications, data, and operational processes to establish a technical baseline	Cloud Architect	16 hours
Organizational Readiness Review	Evaluate people, governance, cultural alignment, and change management maturity	Change Management Consultant	8 hours
Workload Suitability Analysis	Classify workloads based on migration fit (lift-and-shift, re-platform, etc.)	Cloud Architect	10 hours
Security & Compliance Evaluation	Assess regulatory alignment, IAM controls, data security, and compliance posture	Security Analyst	8 hours
Cost-Benefit & ROI Analysis	Compare the TCO of the current vs the cloud model, assess licensing, and identify cost optimization opportunities	FinOps / Cloud Cost Consultant	10 hours
Strategy Definition Workshops	Conduct collaborative workshops to define the cloud model, architectural principles, and strategic direction	Cloud Strategist	8 hours
Roadmap and Recommendations	Formulate a phased, prioritized transformation roadmap with pilot identification, dependencies, and timelines	Cloud Consultant	10 hours
Documentation and Executive Summary	Compile all findings, strategic inputs, and final recommendations into structured, board-ready documentation	Cloud Consultant	8 hours
Review and Final Presentation	Conduct stakeholder workshops to walk through the findings, confirm alignment, and support final decision-making	All Roles (Joint Session)	4 hours

Note:

- *The estimated hours mentioned are **business hours** and are calculated based on remote delivery unless otherwise agreed upon.*
- ***Travel, accommodation, meals, and other incidental expenses are not included** in the service scope or pricing. If onsite visits are required, such expenses will be billed separately at actuals, subject to prior approval.*
- *Engagement timelines are subject to timely access to stakeholders, systems, and required information from the client side.*
- *Any additional work outside the defined scope will require a **formal change request** and may impact cost and timelines.*

4. Deliverables

- **A detailed report**
  A thorough assessment can help identify potential security gaps and vulnerabilities in the system, enabling proactive measures to be taken to address them.
  - Overview of cloud assessment scope and objectives
  - Assumptions and limitations of the assessment
  - Methods and tools used
  - Current environment or systems analysis
  - Security requirements
  - Summary of findings and recommendations
  - Assessment results – General review & Risk assessment (including identified assets, threats, impact, and the risk results analysis)

- **Review workshops**
  - Walkthrough of findings with stakeholders
  - Clarity on next steps and priorities
  - Opportunity to validate assumptions and refine focus

- **Decision Time**

  If you proceed with implementation:
  - High-level project plan
  - Effort estimates, roles, and timelines
  - Commercials

  Note: Solution /scope/deliverables will vary depending on customer requirements.

5. Service Plans

Cloud Assure offers flexible billing models tailored to business needs. However, **only fixed pricing models are supported** under this service.

Product Bundle	Product Line	Plan Description	UOM
Cloud Assure Service	Cloud Assessment	A structured assessment evaluates your infrastructure, applications, data, and IT processes, along with organizational readiness across skills, governance, and culture. Workloads are analysed for cloud suitability, and security frameworks are reviewed against compliance standards. The outcome includes a readiness score and maturity index, delivered with a detailed report and actionable roadmap. >Pricing is effort-based, calculated on estimated man-hours or man-days, with additional costs for tools and integrations.	Man Hour
Cloud Assure Service	Cloud Advisory	This service provides strategic guidance to help organizations align cloud initiatives with business goals, enhance operational readiness, and ensure sustainable success. It covers key areas like strategy, governance, talent, cost optimization, and change management, with tailored insights delivered through focused stakeholder engagements and custom recommendations as needed. > Pricing is effort-based, calculated on estimated man-hours or man-days, with additional costs for tools and integrations. An advisory service consultant is available during business hours for workshops. Travel, stay, food, and insurance are excluded.	Man Hour

***Note**: Software, tools, and related licenses may be charged separately based on the project scope. A dedicated SKU is available for these components.*

6. Why Select Cloud Assessment and Advisory?

We help you understand your current IT landscape, identify the right-fit cloud strategy, and chart a roadmap aligned with your business objectives. Our actionable recommendations are backed by deep analysis, cost modeling, risk assessment, and compliance mapping.

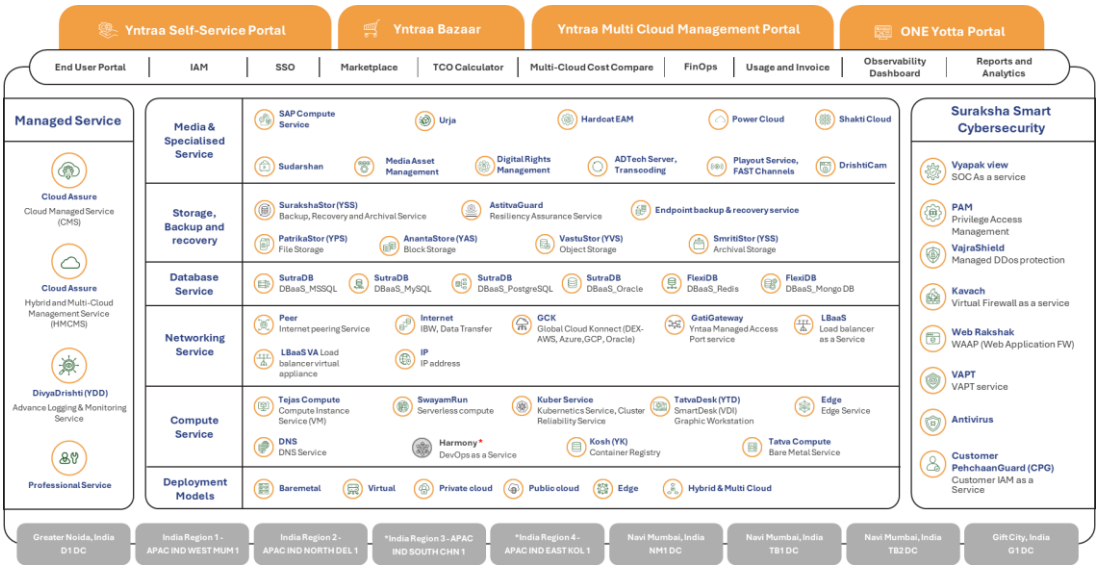
- **Holistic Assessment** – Covering infrastructure, applications, security, performance, cost, and compliance.
- **Vendor-Neutral Advice** – Unbiased guidance across AWS, Azure, GCP, and hybrid environments.

- **Business-Aligned Strategy** – Cloud adoption plans tailored to your growth, budget, and risk posture.
- **Rapid Insights, Actionable Results** – Accelerated assessments with clear deliverables and next steps.
- **Cross-Functional Expertise** – Inputs from cloud architects, security specialists, FinOps consultants, and transformation advisors ensure well-rounded strategic direction.
- **Future-Ready Transformation Roadmap** – We don't just assess; we lay the foundation for a scalable, secure, and efficient cloud journey with a phased, prioritized transformation roadmap.

7. About Yntraa Cloud

Yntraa Cloud is an indigenous, hyper-scale cloud platform built for enterprises with India in mind. From foundational infrastructure to advanced managed services, Yntraa Cloud empowers organizations to build, scale, and optimize their cloud journeys with agility, resilience, and compliance.

Our comprehensive cloud portfolio spans across:



Whether you're modernizing legacy systems or building cloud-native innovations, Yntraa Cloud offers the tools, services, and strategic support to accelerate your digital transformation securely and efficiently.
