1. Backup, Recovery and Archival Service

Click to Protect Your Data and Safeguard Your Business

Data is at the core of every organization — it must be protected, recoverable, and secure at all times. As data volumes surge across the edge, data centers, and cloud environments, traditional protection strategies are no longer sufficient. Organizations must modernize their approach to counter evolving threats such as ransomware, while also preparing for natural disasters, hardware failures, and other unforeseen disruptions.

At the same time, businesses face increasing pressure to meet tighter Recovery Point Objectives (RPOs) and Recovery Time Objectives (RTOs) — all while simplifying operations and ensuring optimal resource utilization.

Today, data protection and application availability are among the most critical challenges faced by organizations of all sizes. Without a robust data protection strategy, data loss is not a risk — it's a certainty.

We understand these challenges. That's why we offer a comprehensive, reliable backup and recovery solution designed to address them all — delivering security, simplicity, and peace of mind.

Backup, Recovery, and Archival Service (BRaaS) provides a flexible, scalable, and reliable end-to-end environment for protecting physical, virtual, and application-level data. This fully managed service delivers comprehensive data protection — encompassing backup infrastructure, software, and ongoing management support — to ensure business continuity and data integrity.

The solution supports both file-based and image-based backup methods, leveraging a combination of full and incremental backups. This hybrid approach ensures a high level of protection against data loss while simplifying recovery processes.

Our service is designed to address several major challenges organizations face today:

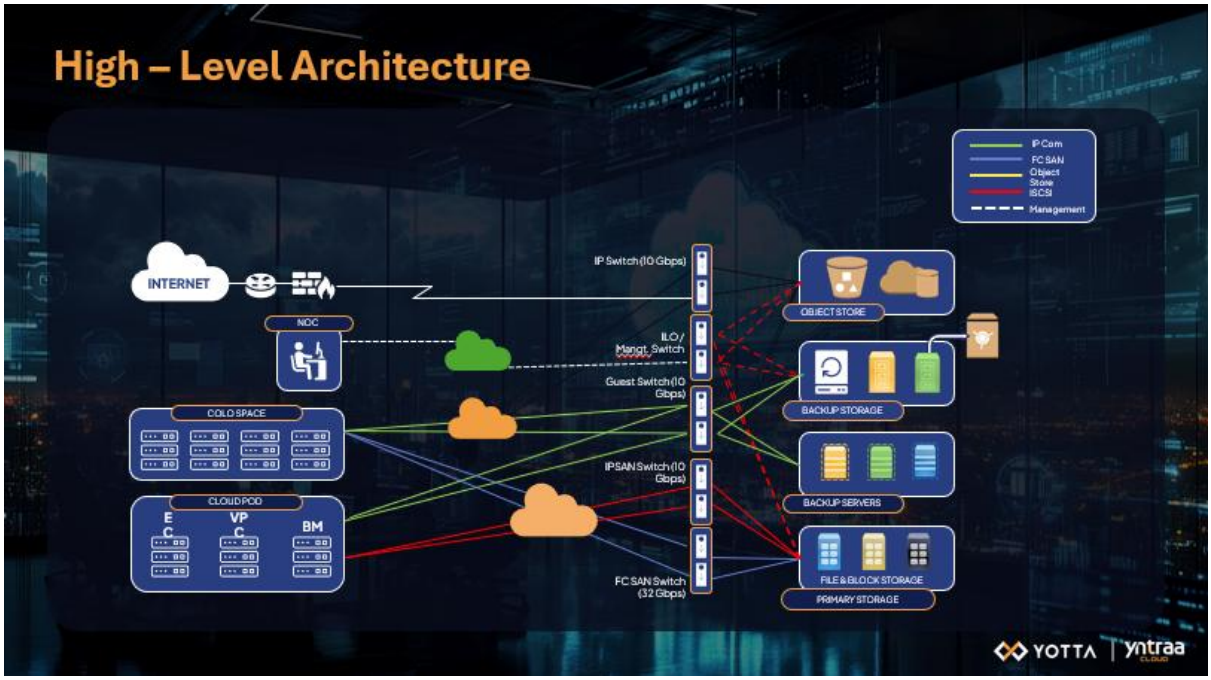
- Application-aware backup with granular recovery
- Zero performance impact during backup operations
- Reduced complexity and cost of backup management
- Consistent and reliable recovery processes
- Support for heterogeneous IT environments
- Adaptability to new technologies such as cloud infrastructure, containers, and SaaS applications

2. Service Design and Architecture

Yntraa is designed and architected with a core set of guiding principles to ensure a robust and future-ready cloud platform. These principles include:

- Operational Excellence – Streamlined operations, automation, and continuous improvement.
- Security, Privacy, and Compliance – Enterprise-grade security controls, data privacy by design, and adherence to regulatory standards.
- Reliability – Highly available and fault-tolerant infrastructure for mission-critical workloads.
- Cost Optimization – Flexible pricing and resource efficiency to maximize ROI.
- Performance Efficiency – Scalable resources and optimized compute for varying workload demands.
- Sustainability – Eco-conscious design to reduce environmental impact and promote green IT practices.

High level Architecture



The above figure shows typical backup connectivity to a hosting customer infrastructure. All levels switches, storage controllers' ports are configured for high availability. Any failure of Port or switch or controller will not affect the production.

The server accesses the disk-based backup Storage through the redundant path in the event of any individual component failure. Offers 99.95% uptime SLA on the backup infrastructure with built in high availability.

NOTE: Backup, Recovery and Archival Service is NOT offered as a stand-alone as remote backup service. ROBO solution explained below and can be availed subject to feasibility as well as with the fulfilment of other pre-requisite requirements.

Backup and Recovery Service includes scheduled data backup and data restoration using disk storage or tape backup using tape-out along with complete management, continuous maintenance, and support. Further remote backup and cloud backup solutions can be extended as custom solution and specific to customer requirement.

The backup infrastructure architecture remains same across all data centres; however, some locations may be equipped with additional hardware to support increased demand for backup capacity. While standard backup and recovery services include SLAs, the ROBO solution's performance and recovery times are contingent upon the specific remote site's infrastructure and connectivity.

3. Service Features and Deliverables

Major features are delivered under this service is illustarted below.

- Automated Backups: Ensures consistent data protection without manual intervention.
- Granular Recovery: Minimizes downtime by allowing for the restoration of specific items.
- Secure Storage: Protects backup data from unauthorized access and cyber threats.
- Centralized Management: Simplifies backup management and provides a consolidated view of all backups.
- eDiscovery and Compliance: Facilitates eDiscovery requests and helps meet compliance obligations.
- Cross-Platform Support: Protects data across all major M365 services, Endpoints and Cloud workloads.
- Heterogeouns Workloads and Hybrid cloud support: Various workloads as well as supports private, public and hybrid cloud backup.
- Scalability: Adapts to the growing data protection needs of the organization.
- Reporting and Monitoring: Provides insights into backup status and performance.

Hybrid Cloud Protection

Safeguard workloads and databases across your enterprise — whether they reside on-premises, in a private cloud, or across multiple clouds. This service offers seamless backup and recovery capabilities that ensure business continuity, minimize downtime, and simplify management across diverse IT environments. Whether you're running virtual machines, containerized apps, or critical databases, it delivers reliable data resilience with scalable options tailored to your infrastructure needs.

Sr No	Service Components	Details of Activities
1	BRaaS – Host or Physical Machine	Protect critical data on physical servers and workloads, ensuring fast recovery from hardware failures, accidental deletions, or cyber threats. • Based on per physical Host or Server or Instance • All agents are included and as per customer requirements can be deployed. • Unlimited data transfer, but at the same time customers' needs to subscribe to the required backup storage volume / capacity for taking backup Please refer "Backup Datasheets "for more information
2	Backup & Recovery as a Service – Volume Based Disk Backup	Protect critical data on physical servers and workloads by providing a volume-based disk backup, ensuring fast recovery from hardware failures, accidental deletions, or cyber threats. • Based on Backup Data transfer or Volume and default disk backup delivered • Aggregated volume of Data transfer calculated per month. • Subscription based Volume Quota can be selected which includes Backup software, Infra and other services. • Customer needs to subscribe to the required backup storage volume / capacity for taking backup • All agents and other infrastructure and services are included Please refer "Backup Datasheets "for more information
3	Disk to Tape Backup or Tape out for Compliance	Provides a secure disk to tape backup solution for your workloads, ensuring compliance and long-term retention of critical data. • if there is a specific requirement for backup on Tape then the Service Provider can deploy tape library, media, and backup infrastructure specific to customer on dedicated or shared model to fulfil the requirement and extra charges are applicable defined under service. • Tape Media consumables might be sized as per data size and frequency of tape out and are chargeable to customer.

4	Recovery or Restoration	This service provides comprehensive data recovery and restoration capabilities, allowing for the retrieval of critical data from existing backups to an original or alternate machine. • Restoration on same server or other host provided by the customer is included under backup plan, if there is demand due to any critical failure. Any variation to this can be additionally subscribed on extra charge. • 4 restoration requests in a month are allowed without any charge and all subsequent requests in that month are chargeable. • Any infrastructure required during restoration needs to be provided by customer. if the same has been provided by the Service Provider then it will be charged as extra and payable by customer. • If restoration is from tape media, then charges will vary as per onsite or offsite vaulting criteria. • Latest LTO type (N) / N-2 tape media supported. >(N = LTO 9)
5	Long Term Retention Service	This service provides a long-term data retention solution to meet compliance, regulatory, and legal requirements for securely storing critical data for an extended period. • Customer can define retention period as per his requirement and if required can subscribe to long term retention or archival service
6	Archival Service	This service provides a secure archival solution for moving and storing inactive or legacy data from primary storage to a cost-effective, long-term repository for future reference. • Archival Service: Offers an intelligent and cost-effective archival solution for all your structured and unstructured data, while maintaining control, compliance and satisfying IT modernisation. • Further it is categorised into two types: ACTIVE ARCHIVAL & DEEP ARCHIVAL • An ACTIVE ARCHIVAL integrates intelligent data management software and leverage a scalable object storage for fast archive and access • DEEP ARCHIVAL use offline storage (Tape) for rarely retrieved or on demand access of data.

7	eDiscovery & Compliance	This service provides a comprehensive eDiscovery and compliance solution, enabling the search, identification, preservation, and retrieval of electronically stored information from backups and archives to meet legal and regulatory requirements. • Custodian review and advance search • Read action, export, and integration. • Legal copies and hold • Please refer "eDiscovery and Compliance Datasheet "for more information
8	Onsite Vaulting	This service provides a secure and managed onsite vaulting solution, allowing for the secure storage and management of tapes or other removable media. • Available from Service Provider and it can be at same data centre. • Service can be extended using a dedicated Vault or shared vaulting space. In case of dedicated it needs to be procured by Customer, or same can be facilitated by Service Provider too. • Legal copies and hold
9	Offsite Vaulting	This service provides a secure and managed offsite vaulting solution for backup media, allowing for the secure storage and management of tapes or other removable media at a dedicated third-party vault for disaster recovery and business continuity. • Available from Service Provider in association with a partner and it can be at different partner site. (*Limited availability as of now) • If customer is directly availing this service from partner or 3rd party, then this service is not required.
10	Safe & secure Media Management	This service provides a comprehensive solution for the safe and secure management of physical backup media, ensuring proper handling, classification, tracking, and storage of tapes and other removable media. • Media management is the key for data management. Proper media handling, classifying, cleaning, vaulting, verify at given interval, handing over right media as per demand etc are part of this.

11	Tape Rotation Service	This service provides a managed tape rotation solution for systematically moving backup tapes between onsite and offsite locations, ensuring a reliable backup history and compliance with data retention policies. • Tape rotation or safe media transfer to vault space • Tapes are picked up and dropped off in locking bins / at vault space, ensuring it is safe, secure and on demand accessible • Tape movement using @ FIFO model /Round Robin GFS (Grand-father Father – Son) /Tower of Hanoi principle • Every backup tape is scanned for tracking and documented
12	Preservation Service	This service provides a long-term data preservation solution that ensures the integrity, authenticity, and accessibility of critical data for indefinite periods, often to meet historical, cultural, or legal requirements. • Please Refer "Preserve" Service Presentation and details for more information
13	Endpoint Backup and Recovery solution	Protect critical data on end-user devices such as laptops and desktops by providing a comprehensive endpoint backup and recovery solution, ensuring fast recovery from hardware failures, accidental deletions, or cyber threats. • Please Refer "Endpoint Backup" Service Presentation and details for more information Please refer "Endpoint Datasheet "for more information
14	Disaster Recovery & Continuity	This service provides a robust Disaster Recovery and Business Continuity solution, enabling organizations to recover critical IT infrastructure and data swiftly following a catastrophic event to minimize business impact and downtime. • Using backup technology, also you can plan the DR and achieve business continuity too, which is elaborated below
15	Media Degaussing Service	This service provides a secure media degaussing solution that uses a strong magnetic force to permanently eliminate all data from hard drives and tapes, rendering the media safe for recycling or disposal. • Using Media Degausser hard drives and Tapes are degaussed with a strong, focused magnetic force that ELIMINATES ALL DATA on working and non-working hard drives, leaving the media safe for recycling or disposal.

16	Backup and Recovery Testing	This service provides a comprehensive solution for testing and validating the integrity and recoverability of backup data, ensuring that critical information can be successfully restored according to established criteria. • Testing of Backup restoration as per subscribed plan • Established criteria for data validation after restoration.

Remote Office Or Branch Office (Robo) Backup

Today, businesses have their remote or branch offices spread over multiple locations. Typically, these remote offices have their own local IT infrastructure. This infrastructure includes file, print, web, or e-mail servers, workloads, and desktops, and might also house some applications and databases. Remote offices rely upon these systems to support regional business functions, such as order processing, inventory management, and sales activity.

Too often, business-critical data at remote offices are inadequately protected, exposing the business to the risk of lost data and productivity. As a result, protecting the data of an organization's branch and remote offices across multiple locations is critical for business. Traditionally, remote-office data backup was done manually using tapes or limited or technology is not adequate. Some of the challenges with this approach follow:

- Lack of skilled onsite technical resources to manage backups
- Risk of sending disk / tapes to offsite locations, which could result in loss or theft of sensitive data

Backing up data from remote offices to a centralized data center was restricted due to the time and cost involved in sending huge volumes of data over the WAN. Therefore, organizations needed an effective solution to address the data backup and recovery challenges of remote and branch offices.

Understanding and considering these remote office challenges, Service Provider purposes ROBO backup as solution, but same time advise to have one onsite copy too. As backup recovery operation is a slow process and time consuming, that's why we will not advise ROBO backup without fulfilling these onsite backup conditions. it will work in a hybrid model and satisfy the data protection, on demand recovery and business continuity.

4. Technology Supported

OS AND DATABASES

Server OS & Databases:

- Microsoft Windows Server
- Microsoft Desktop OS (WIN, LINUX & MAC)
- Redhat , Suse Enterprise Linux
- Debian & Fedora, Unix , HDFS
- DB2, DB2 PureScale, DB2 DPF
- Informix, MS SQL, MySQL, Oracle, Oracle RAC
- PostgreSQL, Sybase, SAP on Oracle, SAP HANA,SAP MaxDB

Cloud Databases:

- Amazon RDS for MS SQL, Oracle, PostgreSQL, MySQL, MariaDB, Aurora, DynamoDB, Redshift , DocumentDB
- Google Cloud Database for MySQL, PostgreSQL
- Azure SQL DB, PostgreSQL, MySQL, MariaDB, Cosmos DB
- Oracle Cloud MySQL, Oracle DB Cloud Service
- Alibaba RDS for MySQL, PostgreSQL

FILE SYSTEM & BIG DBs

File Systems:

- Gluster File System, Hadoop (HDFS) – (This includes Cloudera, MapR, etc.), Hbase
- IBM i File System, IBM Spectrum Scale (GPFS)
- Microsoft Windows File System, SMB/CIFS shares
- Lustre File System, Macintosh File System
- NAS, Netapp, NFS shares
- OES File System, OpenVMS, UNIX/Linux File Systems
- **BIG Databases:**
- Cassandra, DataStax Enterprise
- Hbase, Hadoop,Greenplum
- MongoDB, NetApp
- NAS, ScyllaDB

VIRTUAL / CLOUD

Virtualisations:

- VMware vCloud Director, VMware vSphere
- Microsoft Hyper-V, Microsoft Azure Stack
- Nutanix Acropolis Hypervisor (AHV)
- OpenStack, Oracle VM
- Red Hat Virtualization, Amazon Outposts, Amazon VSA v2, Citrix Xen
- Google Cloud VMs, Huawei FusionCompute

Containers and Workloads:

- Docker, Kubernetes – Distribution
- Kubernetes – Hosted (Amazon EKS, Azure Kubernetes Service (AKS), Google Kubernetes Engine (GKE) etc)
- Kubernetes – PaaS
- MySQL, PgSQL
- Red Hat OpenShift

APPLICATIONS

Applications:

- Microsoft Active Directory
- Microsoft Exchange Server
- Microsoft SharePoint Server
- Oracle Enterprise Business Suite
- SAP Business Suite, SAP Netweaver
- SAP S/4HANA
- SAP Landscape Management
- Splunk Enterprise
- Documentum
- IBM Domino (includes IBM Notes)

SaaS Applications:

- Office 365 (Exchange Online, SharePoint Online, OneDrive for Business, Microsoft Teams)
- Google Suite (Google Mail, Google Drive)
- Salesforce

CLOUD INFRA / IAAS

Cloud Infrastructures:

- Amazon Elastic Compute Cloud (EC2)
- Microsoft Azure Virtual Machines
- Google Compute Engine
- Oracle Cloud, Alibaba Cloud

Cloud / Object Storage

- Amazon Simple Storage Service (S3 Standard, S3-IA, S3-RRS, S3 OZ, S3 Intelligent Tiering)
- Amazon Elastic File System (EFS)
- Microsoft Azure Blob Storage, Data Box, File Storage
- Google Cloud Storage
- Alibaba Cloud Object Storage Service

Self-service Integrations & Automation

- Microsoft SCVM, SQL Mangt. Studio Plug-in, ServiceNow, Ansible, Terraform, Python SDK
- VMware vSphere Web Plug-in, vCloud Director Extension, vRealize Automation Plug-in

STORAGE & TAPES

NAS Storage:

- Dell, Dell EMC Celerra/VNX/VNXE/Unity, Isilon
- Hitachi NAS (BlueArc), Huawei OceanStore
- IBM N-Series, NetApp, NexentaStor, Nexsan, Nutanix Files, Oracle ZFS Storage Appliance, Qumulo, Stratus

Snapshot Engienes:

- Amazon EBS, Cisco Hyperflex, DataCore SANsymphony-V
- Dell Compellent, Dell EMC,
- Fujitsu ETERNUS AF / DX
- Hitachi NAS, Hitachi Vantara AMS / HUS / USP/ VSP, HPE Primera, 3PAR
- Huawei, IBM INFINIDAT, Kaminario
- Microsoft Azure, NEC, NetApp
- Nutanix, Oracle ZFS, Pure Storage FlashArray
- Tintri, WD IntelliFlash

For more info please visit: https://www.commvault.com/supported-technologies#databases

5. Recovery or Restore

Recovery / Restoration: Data need to be restored from the latest available backup data or from a previous point-in-time copy. Recovery Options are;

- Instant Data or Volume level Recovery Before or Between a Specified Time
- File / Folders / Full Virtual Machine Recovery
- Recover from anywhere like disk, tape etc
- In Place Recover (restore data to the same location)
- Out of Place Recover (restoring data to a different location)
- Wide range of applications and platform supported for Restoration.

6. Long Term Data Retention and Archival

Retaining and archiving important and complexity comes from the varied reasons for keeping and recovering data lost due to anything from user error to the data centre being destroyed, producing copies of old data to support a suit or defend against one, or maintaining records to meet various regulatory requirements.

Each of these reasons will have a different degree of importance and acceptable cost, depending on the type of business, whether a company is publicly traded or not, the regulatory requirements and the business requirements for each type of data. So, retention or archive needs to be handled with clear set out objective and classifying the data as per their importance, frequency of usage requirement and their period for which it needs to be kept.

Keeping data for more than a year or two requires some thought, especially if you're going to write the data to offline media such as tape, optical disc, or hard disk cartridges. First, you need to ensure that as new systems come online the old systems are warehoused so that old data can be read. Normally data retention period policy is applied when data needs to be retained >6 months and up to 2 years. More than that it goes for archival. Archival can be >2 years to 5 years or more. To meet all these requirements Service Provider extends its offering as below "Application Aware Archival Service". This service further works on file archiving or application specific archiving solutions like Email Archiving etc.

Note: Data Archival Service is not part of this offering, which is part of "Storage as a Service" solution.

- Data is Everywhere and growing rapidly. Nowadays it is vulnerable too. These facts further aggravate with long-term storage challenges. Archiving is an intelligent process for managing inactive or infrequently accessed data, that still has value, while providing the ability to preserve, search and retrieve the data during a specified retention period.
- Archival Service: Offers an intelligent and cost-effective archival solution for all your structured and unstructured data, while maintaining control, compliance and satisfying IT modernization.
    - Make sure data is retained and accessible on demand
    - Ensure compliance and adhere to data security, privacy, and storage
    - Managing the technology refreshments, upgrades, and adoption of new platform / services
    - Keeping costs down while supporting data protection and management. Further, archival service provides two choices and options of archival, and they are.
        - Active Archival
        - Deep Archival

7. Tape Backup

Safe Media Management

Lot of activities take care by our team to ensure that everything run smoothly and delivers the best of service of data protection complete. To do this safe media management is key components and under this you need to take care of Media's as well related library and their vaulting and regular or on demand access as per requirement. Activities they carry under this are.

- Library Types: Dedicated / Shared, Library Operation, Reset, Scan, Clean drives.
- Drive pool management, Tape grouping, physically load and unload tapes into drives.
- Import and exports tapes, move tapes, cleaning media, Delete tapes
- Delete contents of a tape, erase data from tapes, verify a tape, Do Media refresh
- Handover to customer, Vaulting for retention as per safety measures
- Tape rotation as per backup schedule, Scratch group for new or recycled media.
- Cleaning media group reserved for library cleaning tapes.
- Retired media group for tapes that exceed usage thresholds or are manually marked bad.
- Overwrite protect media group for tapes that are manually prevented from aging.
- Catalog media group for tapes that are marked to be catalogued
- Assigned media group for tapes with active jobs currently being retained and managed by Storage Policy copies

Safe Secured Media Vaulting

Though tape primarily used as long-term offsite storage as well as cost effective, same time it needs to be stored at safe and specialised controlled environment to ensure preservation of media and prevent media corruption. That's why Yotta offers " Safe and Secured Vaulting Facility" to store tape backup cartridges on-site or off-site *(through 3rd party partner)* to provide offline protection of critical structured and unstructured data as per legal and compliance requirement. Tape backup and vaulting has been very cost effective and fail-safe method against disaster as well as ransomware attacks

Features

- Fireproof On-site and off-site Vaulting
- Tape rotation or safe media transfer
- Private Space with Controlled environment and an access card reader entry for authorised user
- Controlled, secured and suitable stores environment.
- Precise Temperature and humidity controls
- Delivered with vapor barrier and magnetic shielding

Prod Line	External	Internal	Weight	Capacity
Capacity	Dimensions H x W x D	Dimensions H x W x D	In kg/lbs	DLT / LTO in No's
10 Litre.	534 x 425 x 476 In mm 21 x 16 ½ x 18 ¼ in inches	534 x 425 x 476 In mm 21 x 16 ½ x 18 ¼ in inches	75 / 165.3	24

Data Tape Rotation Service

Scheduled data tape rotation and proper storage is an important aspect of business continuity plans. It isn't enough to store tapes: they must be picked up promptly, handled correctly, securely stored, and returned on request.

Yotta offers cost-effective services to make rotations easier for you. This service offered 24*7 by our Smart RHES Specialist and further along with media vaulting and procedures it ensures your data is safe as well as accessible when you need it. Its features are

- Tape rotation or safe media transfer to vault space
- Tapes are picked up and dropped off in locking bins / at vault space, ensuring it is safe, secure and on demand accessible
- Tape movement using @ FIFO model /Round Robin GFS (Grand-father Father – Son) /Tower of Hanoi principle

Every backup tape is scanned for tracking and documented.

Media Degaussing Service

The service is for those who want guaranteed permanent data erasure before scrapping their IT equipment to ensure that their data will never fall in wrong hands. After degaussing the hard drive cannot be used again.

We degauss hard drives and tapes using a Garner degausser with a strong, focused magnetic force that ELIMINATES ALL DATA on working and non-working hard drives, leaving the media safe for recycling or disposal.

Service Deliverables: Certificate of Erasure can be provided for audit and compliance purpose.

8. Backup and Recovery Testing

A backup and recovery test is a process of assessing the effectiveness and quality of backup in totality which consists of software, hardware etc.

Backup and recovery testing is the cornerstone of your Business Continuity and Disaster Recovery plan (BCDR). It is used to make sure that a backup and recovery plan will work the way it is supposed to after a real emergency. Backup and recovery testing is also a must for compliance reasons. The ISO-27001 Information Security standard states, as one of its mandatory controls, to protect against loss of data.

Features

- Data from backups is recovered using well-defined mechanisms to ensure that recovery is possible within the established recovery time objective (RTO) for the workload.
- Periodic testing of Backup restoration as per subscribed plan

- Established criteria for data validation.

Testing Process highlights

- Identify data sources
- Establish criteria for data validation.
- Establish your objectives
- Assess recovery capability.
- Do test restoration or recovery
- Validate data recovery
- Measure time required for restoration
- Notify stakeholders.

Service Prerequisites and Limitations

- Required systems or instance (Backup) is hosted at Service Provider Data Center or as suggested by Service Provider.
- Administrative rights and permission to share with Service Provider to deliver this service, with required control and security.
- Support for systems or software which is not part of OEMs compatibility list, will be on best effort basis as there is not back-to-back commitment from the OEM. Also, we reserve the right to reject the same support if it is part of OEM compatibility list
- For any customer who supplies hardware or software components, the customer is to make sure to have an active support contract with respective OEM/vendors throughout the contract with Service Provider.
- Service Provider support team will coordinate and follow up with the vendor on behalf of the customer and will keep the customer updated with the status periodically. If, the customer is the owner of relevant components, and it is the customer's responsibility to push/escalate with OEM/vendor in terms of timely response/work around / solution / replacement etc.
- For tape back customers' needs to subscribe tape media from Service providers (Service Provider). If there is a dedicated tape library used for customer data backup, then this option can be extended as options to customer. But in shared backup the same option is ruled out, and all service needs to be subscribed from MSP
- Service Provider will not be responsible for any delays from the vendor, hence any service interruptions.
- RCA will be shared only in case of S1 Cases. Details on RCA will be as per availability of Logs.
- Other than backup, recovery & archival also we provide professional services like, backup advisory, resiliency service etc, which are not covered under this PSS, for the same please refer IT professional service PSS.

9. Service Plans

Product Name	Plan Description	UOM
Multi-Tenant BRaaS Endpoints	Safe and secure Backup, Recovery for Endpoints like laptops and desktops on Cloud • One Year Data Retention with Unlimited data storage • Annual subscription per user per device • If usage goes beyond subscription limit then additional charges will be applicable	Per User
Multi-Tenant BRaaS Endpoints with Compliance	Safe and secure Backup, Recovery for Endpoints like laptops and desktops on Cloud with Compliance and eDiscovery • One Year Data Retention with Unlimited data storage • Annual subscription per user per device • If usage goes beyond subscription limit then additional charges will be applicable	Per User
Multi-Tenant BRaaS M365 with Limit of 50 GB Storage	Safe and Secure M365 Backup and Recovery with 50 GB storage • Retention with 50GB data storage, if data usage exceeds the limit then storage needs to be subscribed at extra charges • If usage goes beyond subscription limit then additional charges will be applicable	Per User

Multi-Tenant BRaaS M365 with Limit of 50 GB Storage with Compliance	Safe and secure Backup, Recovery for M365 with Limit on Cloud with compliance • Retention with 50GB data storage, if data usage exceeds the limits then storage needs to be subscribed at extra and charges will apply • M365 included Exchange Online, OneDrive, SharePoint and Teams • If usage goes beyond subscription limit then additional charges will be applicable	Per User
Multi-Tenant BRaaS M365 Backup with Unlimited Storage	Safe and secure Backup, Recovery for M365 with Unlimited storage on Cloud • Retention with unlimited data storage • M365 included Exchange Online, OneDrive, SharePoint and Teams • If usage goes beyond subscription limit then additional charges will be applicable	Per User
Multi-Tenant BRaaS M365 Backup with Unlimited Storage with Compliance	Safe and secure Backup, Recovery for M365 with Unlimited Storage on Cloud with Compliance • Retention with unlimited data storage • M365 included Exchange Online, OneDrive, SharePoint and Teams • If usage goes beyond subscription limit then additional charges will be applicable	Per User
Multi-Tenant BRaaS Risk Analysis M365	Risk Analysis For M365 • Identifies vulnerabilities and associated risks on MS Exchange Online and MS OneDrive • Subscribed per User per Annum	Per User

Multi-Tenant BRaaS MS Dynamics 365 Backup	Safe and secure Backup, Recovery for Microsoft Dynamics365 on Cloud • One Year Retention with unlimited data storage • If usage goes beyond subscription limit then additional charges will be applicable	Per User
Multi-Tenant BRaaS Salesforce	Safe and secure Backup, Recovery for Salesforce on Cloud • One Year Retention with unlimited data storage • If usage goes beyond subscription limit then additional charges will be applicable	Per User
Multi-Tenant BRaaS Google Workspace with Limit of 50 GB Storage	Safe and Secure Google Workspace Backup and Recovery with 50 GB storage • One Year Retention with 50GB data storage, if data usage exceeds the limits then storage needs to be subscribed at extra and charges will apply • If usage goes beyond subscription limit then additional charges will be applicable	Per User
Multi-Tenant BRaaS Google Workspace with Unlimited Storage	Safe and secure Backup, Recovery for Google Workspace with Unlimited Storage on Cloud • Retention with unlimited data storage, if data usage exceeds the limits then storage needs to be subscribed at extra and charges will apply • If usage goes beyond subscription limit then additional charges will be applicable	Per User

Multi-Tenant BRaaS Active Directory	Safe and secure Backup, Recovery for Active Directory on Cloud • Comprehensive coverage of organizational units (OUs), group policy objects, users, groups, app registrations and more • For Active Directory(On-premise) storage to be subscribed separately • For Azure AD(now Microsoft Entra ID) bundeled Unlimited data storage • For AD(On-Cloud VM) BYOS or needs to be subscribed separately • If usage goes beyond subscription limit then additional usage are charged in monthly arrears, included in your monthly invoice	Per User
Multi-Tenant BRaaS Virtual Instance	Safe and Secure Backup Recovery of Virtual Machine • Disk Backup with Unlimited Data transfer Per Instance. If multiple VM backup required then need to subscribe in multiple units or instances • Default Backup Policy implemented DIWF, 14 Days Retention Period,But customer can customise as per their organisational policy. Restoration on the same server is included, If other than same server then the resource and efforts are charged separately. • Includes features like Snapshot, File System, and Database backups under this plan. • Disk Space in GB for backup needs to be subscribed separately as per consumption	Per Instance

	requirement	
Multi-Tenant BRaaS Storage	Storage Volume for BACKUP or RETENTION Purpose • Minimum Pack of 50 GB subscription and available in multiples units of 50GB Pack • Storage space exceeding subscribed plan limit to be charged as per add on rate applicable	Per GB
Multi-Tenant BRaaS VM Data Volume Mode	Safe and Secure Backup Recovery of VM • Disk Backup on data transfer mode for unlimited VM Instances or multiple VM instance can be attached to the same backup plan. • Default Backup Policy implemented DIWF, 14 Days Retention Period,But customer can customise as per their organisational policy. • Includes features like snapshot, File System, and Database backups under this plan. • Disk Space for backup needs to be subscribed separately as per consumption requirement. Data Transfer exceeding subscribed plan limit to be charged as per add on rate applicable Per GB.	Per GB
Multi-Tenant BRaaS Storage	Storage Volume for BACKUP or RETENTION Purpose • Minimum Pack of 50 GB subscription and available in multiples units of 50GB Pack • Storage space exceeding subscribed plan limit to be charged as per add on rate applicable	Per GB

Multi-Tenant BRaaS Physical Machine or Baremetal	Safe and Secure Backup Recovery of Physical Machine or Baremetal • Disk Backup on data transfer mode for Physical Machine or Baremetal • Default Backup Policy implemented DIWF, 14 Days Retention, same time customer can customise the policies as per its organisational policy. Restoration on the same server is included, If other than same server then the resource and efforts are charged separately. • Data Transfer exceeding subscribed plan limit to be charged as per add on rate applicable Per GB Per Month. Includes featuers like Snapshot and File System backups under this plan.Database backup on physical servers is not included in this plan and has to be subscribed separately • Disk Space for backup needs to be subscribed separately as per consumption requirement	Per GB
Multi-Tenant BRaaS Storage	Storage Volume for BACKUP or RETENTION Purpose • Minimum Pack of 50 GB subscription and available in multiples units of 50GB Pack • Storage space exceeding subscribed plan limit to be charged as per add on rate applicable	Per GB

Multi-Tenant BRaaS Database	Safe and Secure Backup Recovery of Databases on Physical servers • Disk Backup on data transfer mode for Database on physical servers • Databases like MSSQL, MYSQL, Oracle, Oracle RAC, SAP HANA and more, for more info pls refer datasheet • Default Disk Backup Policy implemented DIWF, 14 Days Retention Period,But customer can customise as per its organisational policy. Restoration on the same server is included, If other than same server then the resource and efforts are charged separately. • Data Transfer exceeding subscribed plan limit to be charged as per add on rate applicable Per GB Per Month. • Disk Space for backup needs to be subscribed separately as per consumption requirement	Per GB
Multi-Tenant BRaaS Storage	Storage Volume for BACKUP or RETENTION Purpose • Minimum Pack of 50 GB subscription and available in multiples units of 50GB Pack • Storage space exceeding subscribed plan limit to be charged as per add on rate applicable	Per GB

Multi-Tenant BRaaS Kubernetes or Containers	Safe and Secure Backup Recovery of Kubernetes or Containers • Covers Disk Backup on data transfer mode for Kubernetes or Containers • Disk Backup of persistent volumes and supports all CNCF distributions • Default Backup Policy implemented DIWF, 14 Days Retention Period,But customer can customise as per its organisational policy. • Data Transfer exceeding subscribed plan limit to be charged as per add on rate applicable Per GB Per Month. • Restoration on the same Machine is included, If other than same server then the resource and efforts are charged separately. • Disk Space for backup needs to be subscribed separately as per consumption requirement	Per GB
Multi-Tenant BRaaS Storage	Storage Volume for BACKUP or RETENTION Purpose • Minimum Pack of 50 GB subscription and available in multiples units of 50GB Pack • Storage space exceeding subscribed plan limit to be charged as per add on rate applicable	Per GB
Multi-Tenant BRaaS CleanRoom Recovery	Clean Room Recovery of data incase of securty breach or ransomware attack • Provides an automated way to clean data recovery without any vulnerabilities, corruption etc. A cleanroom is a cloud-based, secure environment where you can recover your data in a ransomware-free	Per GB

	state. • Clean Room Recovery subscription and activation is applicable only if Air Gap Protection (Hot-tier) is already subscribed	
Multi-Tenant BRaaS AirGap Protection - HOT Tier	Safe and Secure Air Gap Protection on HOT Tier • A third-party Cloud Service Provider (CSP), such as Microsoft Azure, will be utilized for air-gapped data storage on the Hot Tier. • Subscription will be based on actual data backup consumption requirements. Upgrades or incremental subscriptions can be availed at any time to accommodate changes in storage needs. • To enable connectivity between your Data Center and the cloud, a dedicated Express Connectivity solution (such as AWS Direct Connect, Azure ExpressRoute, etc.) will be required. Please note that this service involves additional fees, as per the applicable pricing from the service provider.	Per GB
Multi-Tenant BRaaS AirGap Protection - COOL Tier	Safe and Secure Air Gap Protection on COOL Tier • A third-party Cloud Service Provider (CSP), such as Microsoft Azure, will be utilized for air-gapped data storage on the Cool Tier. • Subscription will be based on actual data backup consumption requirements. Upgrades or incremental subscriptions can be availed at any time to accommodate changes in storage needs. • To enable connectivity between your Data Center	Per GB

	and the cloud, a dedicated Express Connectivity solution (such as AWS Direct Connect, Azure ExpressRoute, etc.) will be required. Please note that this service involves additional fees, as per the applicable pricing from the service provider.	

Deliverable and Scope

- Looking at the filled SPQ (Service provisioning questionnaire) and subscribed plan Service Provider's delivery team provision the service
- Connect the host or servers to backup environment. Supply of NIC or interface card is customer scope.
- If there is any backup agent is required for backing up data is included under provider's scope. Customers need to express or elaborate specific DB or applications under SPQ
- Application aware backup /open file backup / online backup which require specific agent and if OEM supports then it is part of offering.
- Default backup plan configured is DIWF, 14 Days Retention or else as per customer instruction shared under SPQ. Under SPQ a minimum Retention period of 7 days is supported. Customers opting for Retention period of less than 7 Days should acknowledge the associated Risks and forego the SLAs related to data restoration. Any customized backup plan that is different from the default backup plan may attract additional charges.
- Backup schedule: we setup calendar-based backup schedules for automatic, unattended backup of all clients across the network.
- Service Provider performs full backups of customer servers on a monthly and weekly basis, and incremental backups on a daily basis. All backup jobs are default scheduled to run between 7PM and 7AM local time (IST), can be changed as specified by customers. Daily backup jobs run every day of the week (Monday – Sunday). Also, the same backup schedule can be set as per customer choice. Service Provider reserves the right to reschedule a planned backup job as needed in the event of planned system maintenance.
- Customers select and agree to a minimum monthly backup volume based on their estimated needs based on the plans listed above.
- Customers can increase or decrease their committed backup volume, as per their business needs and growth.
- If the customer exceeds the agreed monthly backup volumes and incurs additional overage charges, then the agreed monthly backup volumes will be billed accordingly. The customer may also benefit from moving into the next plan by enhancing the initial agreed volumes and consequently reducing the per GB price point. Similarly, customers can downgrade by looking at the usage of subscribed quota.

Note: If the customer changes the backup plan from lower to higher or vice-versa, there is a minimum period of 30 days before they can make the changes in volume again.

- This includes regularly scheduled flat file backup of customer designated directories, files and volumes.
- Customers can make maximum four (4) restore requests on same server in a month, however the number of additional backup requests are chargeable, irrespective of the

backup plans chosen with standard retention period. This request may be for partial or full restoration or for drill purposes too, does not matter. Any kind of request will be counted. Also, same can 't be accumulated or carried forwarded if the customer has not consumed the same.

- Other than restoration from the original server or to another server will be charged extra. This restoration can be from a disk or from a tape too. But same time, the critical situation where servers crashed and required restoration at different servers is excluded from this charge.
- If the media is stored offsite, then the restoration depends upon the quality of tape media
- Ad hoc backup scheduling will be against additional charges and subject to feasibility against valid SOF. The initiation of this backup should be within 1 normal Business hour (9 AM to 9 PM) of notification.
- The restore data location on the server space is subject to the required server volume free space/mount point availability. Customer has to specify the same while making the request.
- Restoration commencement will be one hour after raising a service request, in the event of a disaster. Service Provider will initiate the restoration of their data in the shortest acceptable timeframe.
- Note: Restore failure due to media defect does not constitute a failure of this service. Also, Service Provider is not responsible for any actual content of the data.
- Default Retention of customer backup files for a limited time before deleting/overwriting the data. The current retention period is as follows:
- Daily incremental backed up data: one week (7 days)
- Weekly backed up data: one month (30 days)
- Monthly backed up data: two months (60 days)
- Security: We ensures that customer data is protected through a comprehensive security program that provides security at multiple layers, including physical, logical and network security.
- Proactive monitoring and fault resolution are Service Provider's responsibility.

Optional Services

- In addition to the standard deliverables, if any optional services are available then as per subscription extra charges will be applicable.
- Offsite vaulting, Tape rotation service etc are available as optional services
- Offsite vaulting is offered by partner and subject to feasibility and against additional commercials. If required, the same can be subscribed directly from partner too.
- On site / cloud Backup service can be extended to non-co-located and non-hosted customer, but same needs to be validated and facilitated by SE under custom plan and pricing.

Standard Terms & Conditions

- Prices are in INR & all taxes will be extra as applicable.
- Prices are subject to change as refer the pricing notification on the web or updated released version of PSS or Price schedule.

- All services bundled with specific plans are part and parcel of bundle.
- The minimum contract period for Backup-as-a-Service is 1 Month. Withdrawal of service before completion of 1 month liable to pay full term charges.
- Except where customers charge as per a cloud contract, same is not applicable. The minimum contract period will be 1 month or 1 hour depending upon the customer signed cloud contract.
- Delivery of service is within 72 hours from the receipt of confirmed PO and advance payment.
- Ownership of the hardware & software remains with Yotta Infrastructure Solutions LLP
- Services bundled with specific plans cannot be linked to any other service components.
- All upgrades and downgrades are available only through Plan upgrade or downgrade option except the Top up plans, which are specifically mentioned above.
- Operating System, Database Software, other software, and Admin services shall be subscribed separately.
- All one-time service charges are payable 100% in advance and all recurring charges are payable monthly in advance along with the confirmed Purchase Order. Reactivation shall be considered as fresh orders with setup fees applicable as well as resumption / reactivation charge.
- All charges and fees are exclusive of any taxes, levies and duties as per law of Land rules.
- Minimum 30 days or due minimal billing cycle period as prior notice is required for any downgrade of service. Upgrade and renewal can happen at any time as per subscription of upgrade or renewal service.
- Minimum 30 days prior notice is must for termination of services. The termination date will be the 1st of subsequent month after completion of termination notice of 30 days and subject to all payment dues clearance.
- End to End management through highly skilled and experienced professionals.
- 24*7 Support: Dedicated and continuous support team available for service assurance
- Web Customer Portal access for Monitoring and Reporting to an authorized customer
- Stringent SLAs to ensures backup infrastructure uptime and further refer Yntraa Cloud SLA documents for more details

10. Why to Select Our Backup and Recovery Service

- 100% OPEX Model and No upfront Cost with Subscription based model
- Transparent & predictable cost with budget visibility
- One stop Solution for all Kinds of Backup, Recovery, and archival need
- Data Security assured with tampered proof data encryption & controlled access
- Highly Scalable Infrastructure with Enterprise Grade Technology
- Highly Reliable and available infrastructure
- Flexible service plans, service policies, payment terms
- Monitoring and reporting of usage and metering are available under customer portal.
- Stringent SLA - 99.95% Service availability of backup infrastructure uptime.
- 24X7 operation and Support

11. Service Support and SLA

Yntraa ensures reliable and responsive cloud service support through a combination of continuous monitoring, expert personnel, and intelligent tooling:

- 24x7 Monitoring: The entire cloud platform and infrastructure are monitored around the clock to detect and respond to any issues in real-time.
- Resource Utilization Dashboard: A user-friendly portal provides full visibility into resource consumption, helping clients manage performance, cost, and capacity effectively.
- Skilled Operations Team: Certified professionals are dedicated to maintaining the platform's stability, availability, and performance.
- Proactive & Reactive Support: Experienced engineers are available to handle both proactive maintenance and immediate response to incidents, ensuring business continuity and optimal workload performance.
- Performance Assurance: Support operations are aligned with predefined service levels, ensuring that workloads meet expected outcomes without disruption.

Foundational Support - Yntraa Cloud Infrastructure is designed for mission-critical enterprise applications. Because of this, the base fees for Yntraa services include foundation enterprise-ready support for those services—there is no extra charge for technical support of production workloads using Yntraa. This is in stark contrast to other providers, who can charge X% of the prior month (or year), sometimes with a minimum charge, whether or not, you ever contact support. You benefit from Foundation support that's included in the base service fee, regardless of whether you use it or not.

Note: To learn more please visit our Cloud Assure Service

Yntraa is committed to delivering high-availability, high-performance cloud services backed by strong operational support.

Please refer the following link or document "Service Level Agreement (SLA)" which outlines the service commitments and expectations for cloud platform and service support:

Free Trial

- When you select the "Free Trial Offer", automatically you will get up to Rs. 10,000/- value credited to your account or wallet for trial usage of cloud products and services
- These free trial offers are short term trial offers that start from the time of first usage begins.
- Once the trial value or period of 3 Month which ever expires first, after that customer simply pay standard, pay-as-you-go service rates (see each service page for full pricing details).
- This trial offer excludes the following services like Bare metal, DR Service, any 3rd party software etc. This is a promotional offer. Other exclusions may apply.
