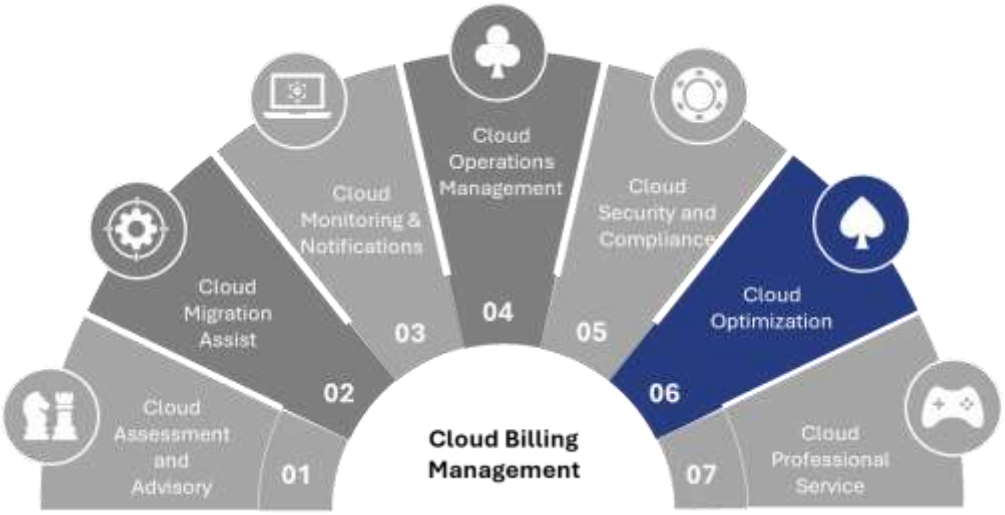
8. About Yntraa Cloud 8

1. Cloud Assure

Cloud Assure is our comprehensive cloud management offering, built on seven distinct service pillars that collectively support every phase of the cloud journey—from initial assessment and migration to ongoing operations, optimization, compliance, and continuous improvement.

This document focuses on the sixth pillar, Cloud Optimization, which aims to ensure that cloud resources are efficiently utilized, performance is continuously improved, and costs are aligned with business value. It provides actionable insights, cost governance strategies, and architectural recommendations to drive sustained operational efficiency and financial accountability in the cloud.



2. Cloud Optimization Service

Cloud Optimization Service is designed to deliver comprehensive cost and performance efficiency across hybrid and multi-cloud environments. Built around FinOps Foundation principles, the service brings together structured cost maturity analysis, expert-driven insights, and hands-on execution under a single offering.

We evaluate your cloud workloads, configurations, and usage patterns to identify opportunities for optimization, whether through rightsizing, workload placement, or architectural adjustments. Our practitioner-led approach ensures that every recommendation is not only aligned with your business goals but also implemented effectively, helping you realize measurable savings and operational improvements.

This service goes beyond advisory by embedding optimization directly into your cloud operations, establishing cost control as a continuous practice. By aligning financial accountability with technical operations, we help organizations make smarter decisions, reduce waste, and achieve greater return on their cloud investments.

3. Our Approach

Our optimization approach is built on a repeatable, data-driven, and tool-agnostic methodology aligned with FinOps principles. It ensures continuous improvement and sustainable cloud operations.

By combining automated insights with expert analysis, we enable continuous improvement through iterative optimization cycles. Our process is adaptable to any cloud platform (AWS, Azure, Hybrid), and is designed to scale with your cloud maturity and business goals.

Our engagement model is collaboration-first, working closely with Cloud Ops, Finance, and Business stakeholders to build shared accountability and ensure alignment on both strategic and tactical goals. We focus on sustainable optimization, embedding automation, tagging hygiene, and policy-driven practices to make cost-efficiency an integral part of your cloud operations, not a one-off activity.

Crucially, our methodology strikes a cost and performance balance, ensuring that savings initiatives do not compromise workload performance, application availability, or user experience. This comprehensive approach enables organizations to continuously optimize, gain financial control, and maximize cloud value with confidence and operational maturity.

Step-by-Step Optimization Approach

Step	Description
Discovery and Stakeholder Onboarding	Understand the current cloud landscape, gather access credentials (read-only), validate billing data, and map key stakeholders.
Baseline Assessment	Assess current cloud spend, resource utilization, and workload performance. Identify tagging gaps, monitor anomalies, and define initial KPIs for cost efficiency and governance.
Opportunity Identification	Use automated and manual techniques to identify waste, inefficiencies, and savings opportunities across services.
Recommendations and Planning	Provide a categorized list of actions with estimated savings, effort, and impact. Prioritize based on feasibility and ROI.
Implementation Support	Assist in executing approved changes through automation or guided support. Monitor for performance regressions.

Continuous Monitoring and Review	Track cost trends, adoption of recommendations, and update the optimization roadmap. Conduct periodic reviews and dashboards.

Optimization Execution Cycle

The service follows a cyclical model to ensure continuous optimization:

Phase	Duration (Est.)	Activities
Discovery and Analysis	Week 1	Workload review, cost usage analysis, baselining
Recommendation and Planning	Week 2	Opportunity mapping, commitment planning, automation strategies
Implementation and Validation	Week 3	Execute changes, validate cost/performance impact
Continuous Review	Quarterly / Half Yearly / Annually	Review reports, monitor new anomalies, and adjust the roadmap

Note: Activities may overlap or vary depending on customer readiness and the availability of required data. The estimated duration applies to environments with 20–30 workloads; for other scenarios, timelines will be determined based on a mutually agreed scope.

4. Scope of Work

The following table outlines the detailed scope of work covered under the Cloud Optimization Service.

Domain	Scope of Work Activities
Compute Optimization	- Analyze instance usage patterns across environments. - Identify idle, oversized, and underutilized compute resources. - Recommend the right instance types, burstable models, or spot instances. - Support implementation of auto-scaling and performance tuning.
Storage Optimization	- Detect unattached volumes, old snapshots, and low-access storage. - Recommend archival tiers and implement lifecycle management - policies. - Review object storage class usage and cold data handling.
Network Optimization	- Analyze data transfer costs across regions and services. - Recommend optimizations such as CDN usage, caching layers, peering, and private links. - Identify high-cost traffic routes and redundant ingress/egress.

Commitment Planning and Reservations	- Review historical usage to identify stable workloads. - Recommend Reserved Instances, Savings Plans, or Committed Use Discounts. - Design hybrid strategies balancing flexibility and savings. - Platform-neutral planning across AWS, Azure, and GCP.
Automation and Scheduling	- Identify non-production or idle workloads for scheduled shutdown. - Define automation policies using cloud-native or third-party tools. - Enable event-driven triggers and intelligent auto-scaling.
Tag Hygiene and Cost Attribution	- Audit existing resource tagging across environments. - Recommend standardized tagging policies and auto-tagging mechanisms. - Enable cost attribution for departments, teams, or applications.
Monitoring and Observability Optimization	- Assess monitoring configurations, log retention policies, and metrics volume. - Optimize alert thresholds, reduce noise, and eliminate redundant logs. - Recommend cost-efficient observability frameworks.
Governance and KPI Tracking	- Establish governance rhythms such as monthly/quarterly reviews. - Define optimization KPIs (e.g., savings realized, coverage ratios, cost per unit). - Implement a dashboard for continuous visibility and accountability.
Tooling and Platform Support	- Support integration with native and third-party tools for analysis and automation. - Tool-agnostic approach adaptable to the client's ecosystem and maturity. - Multi-cloud coverage: AWS, Azure, GCP, hybrid, and on-premises extensions.

Note: Certain activities (e.g., implementation of auto-scaling) are optional or dependent on plan level.

5. Service Deliverables

The following outputs will be delivered as part of the engagement, tailored to the selected optimization plan (Quarterly, Half-Yearly, Annual):

- Optimization Report
- Commitment Planning Strategy Document
- Rightsizing and Scheduling Plan
- Cost Reduction and Performance Tuning Summary
- Network Traffic Analysis and Recommendations
- Implementation Roadmap with prioritized actions
- Quarterly Optimization Review Report
- KPI Dashboard

6. Service Plans

Cloud Optimization Service is offered through flexible engagement plans that align with your cloud spend and operational priorities. Customers can choose from quarterly, half-yearly, or annual optimization cycles, with pricing structured as a defined percentage of total cloud expenditure, ensuring cost control remains proportional, transparent, and results-driven.

Product Bundle	Product Line	Plan Description	UOM
Cloud Assure Service	Cloud Optimization	This service is powered by FinOps principles, helping organizations gain financial control, drive accountability, and maximize business value from cloud investments. > This plan is available with three engagement frequencies—Quarterly, Half-Yearly, and Annually, and billed monthly, and should be captured in the scope. Based on the selected frequency, charges are applied as a percentage of the monthly cloud spend as follows: Quarterly Engagement: 5% of quarterly cloud spend, Half-Yearly Engagement: 3% of half-yearly cloud spend, Annual Engagement: 1% of annual cloud spend.	EA

The Cloud Optimization Service is structured to offer flexibility and scalability through three engagement models: Quarterly, Half-Yearly, and Annual, each designed to meet varying operational rhythms and business objectives. Regardless of the plan, each engagement follows the same proven methodology aligned with FinOps principles and delivers actionable insights and measurable outcomes.

Pricing is performance-linked and charged as a percentage of the monthly cloud spend, making cost control both transparent and proportional to usage.

Engagement Frequency	Monthly Charge (% of Cloud Spend)	Ideal For
Quarterly	5%	Dynamic environments require close optimization, control, and faster turnaround
Half-Yearly	3%	Stable operations with predictable growth and optimization needs
Annual	1%	Mature cloud environments seeking periodic oversight and strategic cost governance

These flexible engagement models ensure that organizations can optimize their cloud environments at the right pace without overcommitting resources or compromising on results.

7. Why Select Cloud Optimization?

We bring a systematic approach to identifying underutilized resources, eliminating inefficiencies, optimizing workloads, and right-sizing deployments. The result? Lower costs, improved performance, and a cloud environment that scales with your business needs.

- **Data-Driven Cost Intelligence** – Continuous monitoring and smart recommendations to reduce cloud spend.
- **Performance Tuning** – Ensure optimal resource usage, latency reduction, and faster response times.
- **Rightsizing and Automation** – Leverage autoscaling, scheduling, and reserved instance strategies.
- **Multi-Cloud Optimization** – Unified visibility and control across public, private, hybrid, and multi–cloud.

8. About Yntraa Cloud

Yntraa Cloud is an indigenous, hyper-scale cloud platform built for enterprises with India in mind. From foundational infrastructure to advanced managed services, Yntraa Cloud empowers organizations to build, scale, and optimize their cloud journeys with agility, resilience, and compliance.

Our comprehensive cloud portfolio spans across:

Whether you're modernizing legacy systems or building cloud-native innovations, Yntraa Cloud offers the tools, services, and strategic support to accelerate your digital transformation—securely and efficiently.
