Executive Summary

Yntraa Compute-as-a-Service: Empowering Moden End-User computing Yntraa's Virtual Desktop as a Service (vDaaS) and Hosted Shared Desktop as a service (vHDaaS) deliver secure, scalable and cost-efficient desktops on the cloud.

In response to the growing demand for flexible hybrid work environments, Yntraa's desktop services combine centralized management with enterprise-level security and compliance, ensuring consistent performance across distributed teams.

By eliminating the complexity of traditional desktop infrastructure, the platform reduces IT overhead, enhances agility, and ensures business continuity through an always-on, resilient cloud foundation.

Service Overview

For organizations adopting modern hybrid work models, **vDaaS** provides a robust, cloud-delivered virtual desktop infrastructure that ensures secure access to desktops and applications from any device, anywhere.The platform combines flexibility, centralized control, and enterprise-grade security to deliver a seamless user experience across diverse environments. With consumption-based pricing, it helps organizations optimize costs while leveraging existing IT investments and skillsets.

vDaaS empowers businesses to support employees, contractors, and partners through a reliable, scalable, and compliant environment ensuring productivity and business continuity across distributed teams.

Virtual Desktop as a Service (vDaaS) is fully compatible with Windows 11, ensuring users enjoy a familiar, high-performance, and secure workspace experience. The service seamlessly integrates with enterprise applications and services, allowing businesses to deliver consistent productivity across devices and locations.

- **PERSONAL - Virtual Desktop as a Service:** This model is built on hosted Desktop-based Windows O.S where desktop interface is remotely displayed. Personal desktops are unique to the user, exactly like a traditional desktop experience Used in the scenario where used need personalized settings, specific applications and store data on the assigned desktop. All applications, data and workspace remain in place, exactly as the user left them.
- **HOSTED Virtual Desktop as a Service:** This model is built on hosted Server-based Windows OS where application interface is remotely displayed. It is shared with pool of multiple users Multiple users logging in simultaneously in their own encapsulated session Usually used for a single Application or in the scenario where users perform fixed routine tasks and don't need any customization on the desktop or OS or application-level Session is reset to clean slate after each session

Service Components & details

vDaaS is composed of modular, enterprise-grade components that together deliver secure, scalable, and high-performance virtual desktop environments. The platform supports both Windows and Linux operating systems, enabling flexible deployment options to meet diverse organizational requirements.

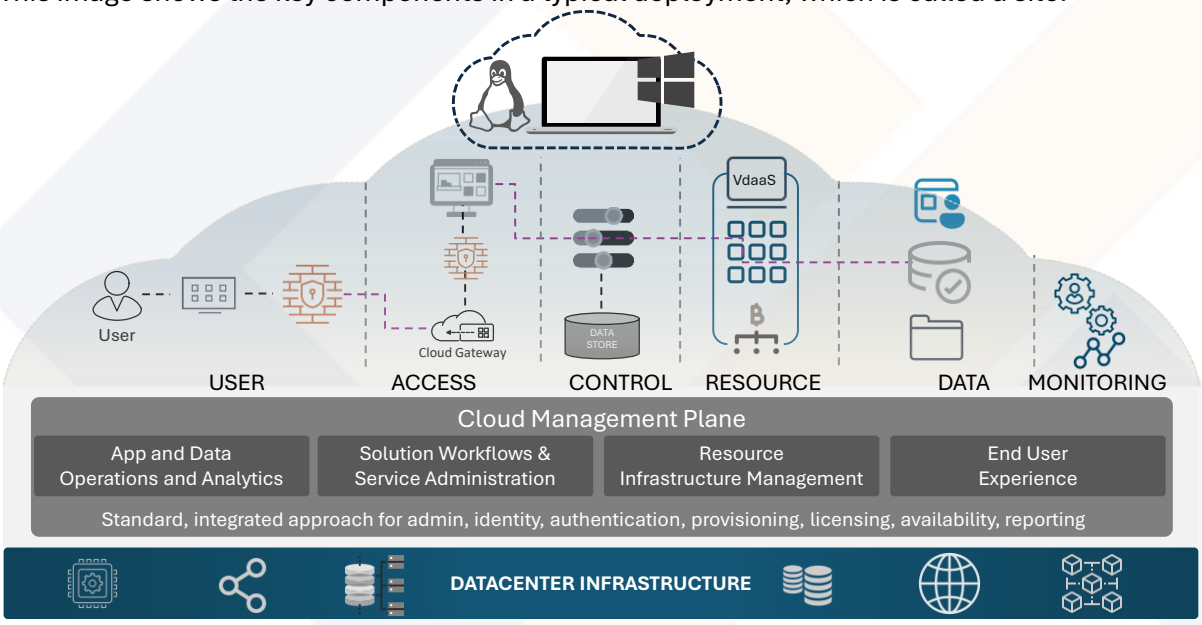
Identity Management: vDaaS integrates advanced identity management capabilities, including Multi-Factor Authentication (MFA) and Single Sign-On (SSO), to ensure secure and streamlined access.

The vDaaS architecture is built on a role-based infrastructure designed for scalability, high availability, and built-in security. It comprises Virtual Delivery Agent (VDA) enabled servers and desktops, along with a Delivery Controller that manages user access and session orchestration. The VDA, deployed on virtual machines within the data center, facilitates secure user connections to virtual desktops and applications ensuring consistent performance and seamless end-user experience.

The Delivery Controller consists of independent Windows services responsible for managing resources, applications, and desktop sessions while optimizing and load-balancing user connections. Each deployment site includes Controllers to ensure scalability and reliability. To minimize latency and maintain consistent performance, all Controllers should be hosted within the same local network (LAN) whenever possible.

End users do not directly interact with the Delivery Controller. Instead, the Virtual Delivery Agent (VDA) acts as an intermediary, managing communication between users and the control layer. When users sign in through StoreFront, their authentication credentials are securely passed to the Broker Service on the Controller, which then retrieves user profiles and provisions access to desktops and applications in accordance with defined policies.

This image shows the key components in a typical deployment, which is called a site.

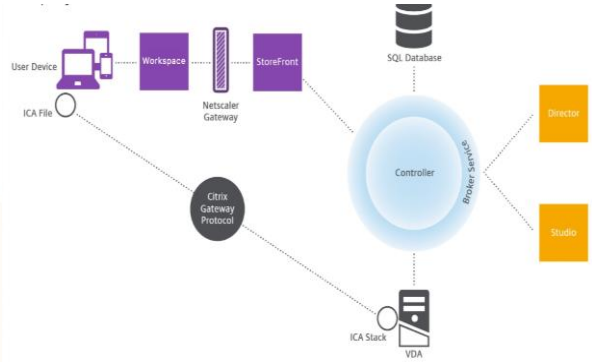


Delivery Controller: The **Delivery Controller** serves as the **central management and orchestration component** within a vDaaS site. Each site includes Controllers, installed on dedicated servers within the data center. For enhanced **reliability and high availability**, multiple Controllers are recommended.

In a deployed environment, the controller integrates seamlessly with hypervisors and related services to:

- Distribute and manage virtual desktops and applications
- Authenticate users and enforce access policies
- Broker secure connections between users and their virtual environments
- Optimize performance and session management
- Balance user connections for improved resource utilization

The Broker Service within the Controller continuously tracks user activity, including active sessions, connected devices, and assigned resources. It also manages user reconnections to existing sessions when needed. The Broker Service executes PowerShell cmdlets and communicates with the broker agents installed on Virtual Delivery Agents (VDAs) over TCP port 80 (port 443 is not supported).



The Monitor Service captures session metrics and historical performance data, storing it in the monitoring database via TCP port 80 or 443, depending on configuration. All operational and session data generated by Controller services is consolidated within the site database for centralized management and analytics.

The Controller also intelligently manages the lifecycle of virtual desktops starting, stopping, or reallocating resources dynamically based on user demand and administrative policies to ensure optimal performance and resource utilization.

Database: Each site requires at least one server database to store configuration settings and session information. This database maintains all operational data collected and managed by core services within the data center, ensuring continuous and reliable connectivity with the Delivery Controller.

In addition to the primary site database, the deployment also includes a configuration logging database and a monitoring database. By default, all databases are hosted in the same location, though their placement can be customized based on organizational or infrastructure requirements.

Virtual Delivery Agent (VDA): The Virtual Delivery Agent (VDA) is installed on each physical or virtual machine within the site, making that machine and its hosted resources applications or desktops available to end users. The VDA registers with the Delivery Controller, enabling user access and resource provisioning. It manages and maintains the secure connection between user devices and virtual machines, ensuring a valid Citrix license is assigned and that all configured session policies are applied.

Each VDA communicates session and connection data to the Broker Service on the Controller via its embedded broker agent, which hosts multiple plug-ins and exchanges real-time session information over TCP port 80.

VDAs are available for single-session and multi-session Windows operating systems:

- Multi-session VDAs support multiple users concurrently on a shared server.
- Single-session VDAs provide a dedicated desktop experience for one user at a time.

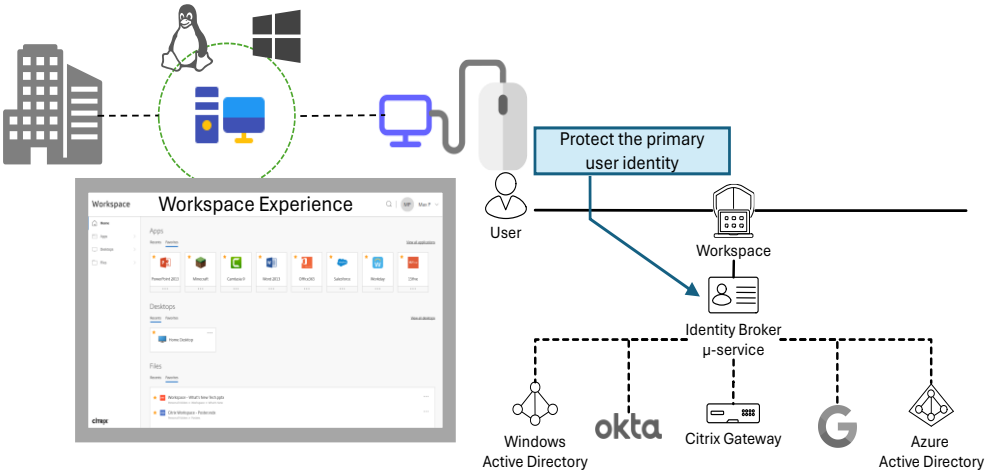
StoreFront: StoreFront handles user authentication and manages access to virtual desktops and applications. It can also serve as an enterprise application store, providing users with self-service access to the resources made available by the organization. StoreFront maintains user preferences such as application subscriptions, shortcuts, and personalized settings to deliver a consistent and seamless experience across multiple devices.

Workspace app: The Workspace App is installed on user devices and endpoints including virtual desktops to provide quick, secure, and self-service access to applications, desktops, and documents. It enables on-demand access to Windows, web, and Software-as-a-Service (SaaS) applications through a unified interface.

For devices that cannot install the native Workspace App client, Workspace App for HTML5 offers the same functionality directly through any modern, HTML5-compatible web browser ensuring accessibility across all platforms without additional software installation.

Citrix Studio: Citrix Studio is the central management console for configuring and administering Citrix Virtual Apps and Desktops deployments. It consolidates application and desktop management into a single interface, eliminating the need for multiple administrative tools. Citrix Studio includes intuitive wizards that simplify environment setup, workload creation, and the assignment of applications and desktops to users streamlining deployment and ongoing management.

Secure Private Access: The Secure Private Access solution strengthens an organization's security and compliance posture by enabling seamless delivery of Zero Trust Network Access (ZTNA) for browser-based applications including internal web and SaaS apps. Using StoreFront as a unified access portal, it provides consolidated experience for accessing web, SaaS, and virtual applications and desktops within the Workspace environment. The solution is fully compatible with existing versions of NetScaler and StoreFront, requiring no version changes or additional configuration.



Service Features

Feature	Detailed Description
Overall Simplicity	Easy to deploy and simple to use
Time to Value	Immediate subscription on demand; quick setup without long lead times
Data Centre Management	Space, power, and cooling handled by Yotta
Infrastructure Responsibility	Servers, storage, and networking managed by Yotta
Scalability & Continuity	High availability and scalability assured by Yotta
Software Licensing & Maintenance	Included under the DaaS offering (or as an add-on subscription)
Multi-Device Access	Accessible via any browser, and any device (laptop, desktop, mobile)
Single Sign-On (SSO)	Integrated access control for users
Fast Boot-Up Time	Quick desktop readiness for end users
Quality of Experience (QoE)	Optimized performance, enhanced by dynamic QoS with H.264 streaming protocol
Identity & Authentication	Built-in identity management with 3rd-party integration (MS / Google Authenticator)
User Behaviour Control	Screenshot protection and OS-level control options
User Audit & Monitoring	Dashboard logs for administrators with login statistics
User Behaviour Analytics	Insights into sessions, usage patterns, and disk utilization
Clipboard Redirection	Clipboard Redirection supported across environments
Print Feature	Print-to-PDF or local printers supported
Drag & Drop	Local file access via drag-and-drop supported
Multi-Monitor Support	Extended workspace across multiple displays (Max 8)
USB Device Support	USB support for common HID devices
Scanner Support	Scanner support available (requires special client)
Configurability / Plan Choice	Virtual environments configurable with flexible plan options
Broker	Single integrated Citrix broker
Supports Cloud Drives	Google Drive, Dropbox, Box, OneDrive supported

Any App	Deliver desktops or applications quickly and easily
Any Storage/IAM	Integrate with leading cloud storage and IAM services
Any Infrastructure	Deploy desktops on public cloud or in Yotta datacenter
OS Support	Windows 11 Enterprise / Windows Server OS
Data Protection	Additional storage and backup options available to safeguard data
Browser Support	User and admin access from any browser and any device

Service Prerequisites & Limitations

Prerequisites

To ensure optimal performance and compatibility, the following prerequisites must be met before deploying or accessing Yntraa Virtual Desktop as a Service (vDaaS):

- **Endpoint Requirements:** Users should have a thin client or low-configuration device capable of connecting to the virtual desktop hosted in the data center.
- **Network Connectivity:** A stable and sustained internet connection is required to access the virtual desktop environment.
- **Bandwidth:** Adequate network bandwidth must be provisioned to deliver a consistent and responsive end-user experience.
- **Licensing:** Appropriate Server OS licenses (e.g., *Windows Server with RDS CALs*) must be available or procured based on deployment scale and usage.
- **User Profiles:** The service is best suited for task workers, data entry personnel, or users accessing a single application or shared environment.
- **Session Persistence:** User sessions are ephemeral, meaning data is not retained unless explicitly redirected to a network share or cloud storage.
- **Application Compatibility:** Deployed applications must be compatible with multi-session environments to ensure stability and performance.
- **Peripheral Access:** Features such as printer redirection, USB access, and local device redirection are governed by organizational policies. These can be enabled by administrators upon request for specific users or user groups, based on access and data security requirements.

Scope of delivery

The **scope of service** encompasses the deployment and enablement of infrastructure required to deliver **virtual workstations** based on the customer's selected service plan.

As part of the setup, **Delivery Groups** are configured to define which virtual workstations (from the available machine catalogs) are accessible and to which user groups they are assigned.

Desktop Workstation Instance (as per selected plan)

Each provisioned instance includes the following:

- **Security:** Integrated **desktop-level antivirus protection** to safeguard user data and system integrity.
- **Support: 24×7 technical assistance** for issue resolution and operational support.
- **Storage: 200 GB total storage**, comprising **100 GB root disk** and **100 GB data disk** allocations.

Limitation

The following conditions and scenarios are excluded from the standard Service Level Agreement (SLA) for Yntraa's Virtual Desktop as a Service (vDaaS):

- **Force Majeure:** Events beyond operational control, including natural disasters, war, or other unforeseen external circumstances.
- **Scheduled Maintenance:** Planned maintenance activities announced at least 7 days in advance.
- **Third-Party Network Failures:** Connectivity or performance issues originating from ISPs or external network operators not managed by Yotta.
- **No Fault Found:** Incidents determined to have originated outside the Yotta-managed infrastructure.
- **Local Access Issues:** Hardware, connectivity, or configuration failures on the customer's premises.
- **Short-Duration Outages:** Service interruptions lasting less than 60 seconds.
- **Customer Response Delays:** Delayed responses or actions from customers that impact issue resolution timelines.
- **Access Restrictions:** Customer-imposed limitations that prevent Yotta from maintaining or troubleshooting infrastructure components.
- **Third-Party Equipment Failures:** Issues arising from devices, systems, or components not managed by Yotta.
- **Operating System Limitation:** All Hosted Shared Desktop (HSD) plans operate on Windows Server 2019 and do not support Windows 10 or Windows 11 environments.

- **Security Features:** Anti-screenshot and anti-keylogging functionalities are disabled by default and require manual activation.
- **Virtual Loopback Ports:** Applications requiring loopback connections must be manually configured with port exclusions.
- **User Personalization:** Multi-session and remote desktop environments may have limited support for full user customization or data persistence.
- **Peripheral Redirection:** Printer and USB redirection are policy-controlled and enabled only upon administrator or group-level request.
- **Browser-Based Virtual Apps:** Certain web applications may experience integration or compatibility limitations when virtualized.
- **Manual Configuration Requirements:** Specific features or performance optimizations may require explicit administrative setup to function as intended.
- **Application Compatibility:** Legacy or custom applications may necessitate specialized configuration, exception handling, or exclusion from the hosted environment.

Service Plan

Yntraa vDaaS provide a flexible choice of plan and pricing model that allows customers to deploy and manage softwares across enterprise workloads.

- **PAY AS YOU GO PLAN**: Pay for resource compute, network etc **capacity by the month**, with no long-term commitments or upfront payments. Scale as your need as well as Increase or decrease consumption on demand.
- **FIXED TERM PLAN**: Pay for resource compute, network etc. **capacity by the year**, with multi-Year (12/36 Months) long-term commitments with **no upfront payments**. Scale as your need as well as Increase or decrease consumption on demand.
- **FLEXI SAVING PLAN**: Save on your Terms for selected services globally by committing to spend with a committed fixed time period like hourly amount for 1 or 3 years, unlocking lower prices until you reach your hourly commitment. Suited for dynamic workloads while accommodating for planned or unplanned changes.
    - Select a one-year or three-year term. Set your plan's hourly amount with personalized recommendations based on your recent usage. Pay in full up-front or pay in part each month at no additional cost. Apply savings across subscriptions, region or at account level.

SKUs:

Personal Desktop:

Product Name	Plan Description
Virtual Personal Desktop Service - VDaaSCI .1X-Large	**Virtual Personal Desktop as a Service with config of 4 vCPUs, 8 GB RAM, 100 GB root Disk,100 GB data disk, Desktop Antivirus, 1 No IP of IPV4 with 1000 GB ingress and egress data transfer.** >It provides individual ownership through personal (persistent) desktops with scalable, secured and Flexible configurations to accommodate your diverse workloads. >Data Transfer exceeding subscribed plan limit to be charged as per add on rate applicable Per GB Per Month.

	>Select any Desktop OS of your choice additionally or Any services not expressly mentioned herein may be made available and will be subject to additional charges.
Virtual Personal Desktop Service - VDaaSCI .2X-Large	**Virtual Personal Desktop as a Service with config of 8 vCPUs, 16 GB RAM, 100 GB root Disk,100 GB data disk, Desktop Antivirus, 1 No IP of IPV4 with 1000 GB ingress and egress data transfer.** >It provides individual ownership through personal (persistent) desktops with scalable, secured and Flexible configurations to accommodate your diverse workloads. >Data Transfer exceeding subscribed plan limit to be charged as per add on rate applicable Per GB Per Month. >Select any Desktop OS of your choice additionally or Any services not expressly mentioned herein may be made available and will be subject to additional charges.
Virtual Personal Desktop Service - VDaaSCI .4X-Large	**Virtual Personal Desktop as a Service with config of 16 vCPUs, 32 GB RAM, 100 GB root Disk,100 GB data disk, Desktop Antivirus, 1 No IP of IPV4 with 1000 GB ingress and egress data transfer.** >It provides individual ownership through personal (persistent) desktops with scalable, secured and Flexibsle configurations to accommodate your diverse workloads. >Data Transfer exceeding subscribed plan limit to be charged as per add on rate applicable Per GB Per Month. >Select any Desktop OS of your choice additionally or Any services not expressly mentioned herein may be made available and will be subject to additional charges.
Virtual Personal Desktop Service - VDaaSGP .Large	**Virtual Personal Desktop as a Service with config of 2 vCPUs, 8 GB RAM, 100 GB root Disk,100 GB data disk, Desktop Antivirus, 1 No IP of IPV4 with 1000 GB ingress and egress data transfer.** >It provides individual ownership through personal (persistent) desktops with scalable, secured and Flexible configurations to accommodate your diverse workloads. >Data Transfer exceeding subscribed plan limit to be charged as per add on rate applicable Per GB Per Month. >Select any Desktop OS of your choice additionally or Any services not expressly mentioned herein may be made available and will be subject to additional charges.
Virtual Personal Desktop Service - VDaaSGP .1X-Large	**Virtual Personal Desktop as a Service with config of 4 vCPUs, 16 GB RAM, 100 GB root Disk,100 GB data disk, Desktop Antivirus, 1 No IP of IPV4 with 1000 GB ingress and egress data transfer.** >It provides individual ownership through personal (persistent) desktops with scalable, secured and Flexible configurations to accommodate your diverse workloads. >Data Transfer exceeding subscribed plan limit to be charged as per add on rate applicable Per GB Per Month. >Select any Desktop OS of your choice additionally or Any services not expressly mentioned herein may be made available and will be subject to additional charges.
Virtual Personal Desktop Service -	**Virtual Personal Desktop as a Service with config of 8 vCPUs, 32 GB RAM, 100 GB root Disk,100 GB data disk, Desktop Antivirus,**

VDaaSGP .2X-Large	**1 No IP of IPV4 with 1000 GB ingress and egress data transfer.** >It provides individual ownership through personal (persistent) desktops with scalable, secured and Flexible configurations to accommodate your diverse workloads. >Data Transfer exceeding subscribed plan limit to be charged as per add on rate applicable Per GB Per Month. >Select any Desktop OS of your choice additionally or Any services not expressly mentioned herein may be made available and will be subject to additional charges.
Virtual Personal Desktop Service - VDaaSGP .4X-Large	**Virtual Personal Desktop as a Service with config of 16 vCPUs, 64 GB RAM, 100 GB root Disk,100 GB data disk, Desktop Antivirus, 1 No IP of IPV4 with 1000 GB ingress and egress data transfer.** >It provides individual ownership through personal (persistent) desktops with scalable, secured and Flexible configurations to accommodate your diverse workloads. >Data Transfer exceeding subscribed plan limit to be charged as per add on rate applicable Per GB Per Month. >Select any Desktop OS of your choice additionally or Any services not expressly mentioned herein may be made available and will be subject to additional charges.

Hosted Shared Desktop:

Product Name	Plan Description
Virtual Hosted Desktop Service-vHDaaSCI.1X-Large	**Virtual Hosted Desktop as a Service with config of 4 vCPUs, 8 GB RAM, 100 GB root Disk,100 GB data disk, Desktop Antivirus, 1 No IP of IPV4 with 1000 GB ingress and egress data transfer.** >This is a cost-effective solution as well as exclusive options of personal or pooled leveraging the multi-session capability with the new Windows Server along with per user RDS SAL licence >Data Transfer exceeding subscribed plan limit to be charged as per add on rate applicable Per GB Per Month. >Any services not expressly mentioned herein may be made available and will be subject to additional charges.
Virtual **Hosted** Desktop Service-vHDaaSCI.2X-Large	**Virtual Hosted Desktop as a Service with config of 8 vCPUs, 16 GB RAM, 100 GB root Disk,100 GB data disk, Desktop Antivirus, 1 No IP of IPV4 with 1000 GB ingress and egress data transfer.** >This is a cost-effective solution as well as exclusive options of personal or pooled leveraging the multi-session capability with the new Windows Server along with per user RDS SAL licence >Data Transfer exceeding subscribed plan limit to be charged as per add on rate applicable Per GB Per Month. >Any services not expressly mentioned herein may be made available and will be subject to additional charges.

Add-Ons:

Product Name	Pan Description
Desktop OS - Windows 11 Enterprise	Desktop OS -Windows 11 Enterprise
MS Win Server Standard Core ALng LSA 2L - 9EM-00562	MS SPLA - Servers - Microsoft Win Server Standard Core, Two License
MS Win Remote Desktop Services	MS SPLA - Servers - Microsoft Win Remote Desktop, Services Subscriber Access License

SAL ALng LSA SAL - 6WC-00002	
Block Volume Storage - 1.5 IOPS	Block Storage as additional storage in vDaaS.

** Hosted Desktop Services will also have similar configurations/SKU's like Virtual Remote desktop

Terms and Conditions

Terms and Conditions

The following terms apply across all Yntraa Cloud services, unless otherwise agreed under the service order form or contract:

- All prices are in INR, and exclusive of taxes and statutory levies.
- Billing Commencement Date begins from the date of service activation no acceptance window applies
- Minimum Subscription Duration: 1 month, as per plan. Early withdrawal is subject to full-term billing.
- Pricing updates are governed by the latest price schedule published on the official portal or released under the tariff card.
- For more information, please visit "Cloud Terms & Conditions," on the Yntraa portal.

Service Benefits (Why Yntraa vDaaS)

Yntraa vDaaS delivers a fully integrated, enterprise-grade virtual desktop solution designed to provide secure, scalable, and high-performance end-user computing for modern organizations.

- **Empower Hybrid Work:** Enable seamless hybrid working and enhance workforce productivity with consistent access to corporate resources.
- **Anytime, Anywhere Access:** Connect to Windows 11, Windows Server OS virtual desktops from any device, anywhere.
- **Comprehensive Platform-as-a-Service:** A complete, cloud-delivered vDaaS offering combining performance, security, and simplicity.
- **Full Administrative Control:** Retain end-to-end configuration and management control while leveraging the service's scalability and automation.
- **Built-in Intelligent Security:** Protect users, data, and networks with integrated threat protection and compliance-driven security measures.
- **Centralized Governance:** Maintain administrative oversight with detailed auditing, access control, and secure sharing without impacting user experience.
- **Cost Efficiency:** Benefit from flexible, on-demand subscription models that optimize infrastructure spending and reduce total cost of ownership.

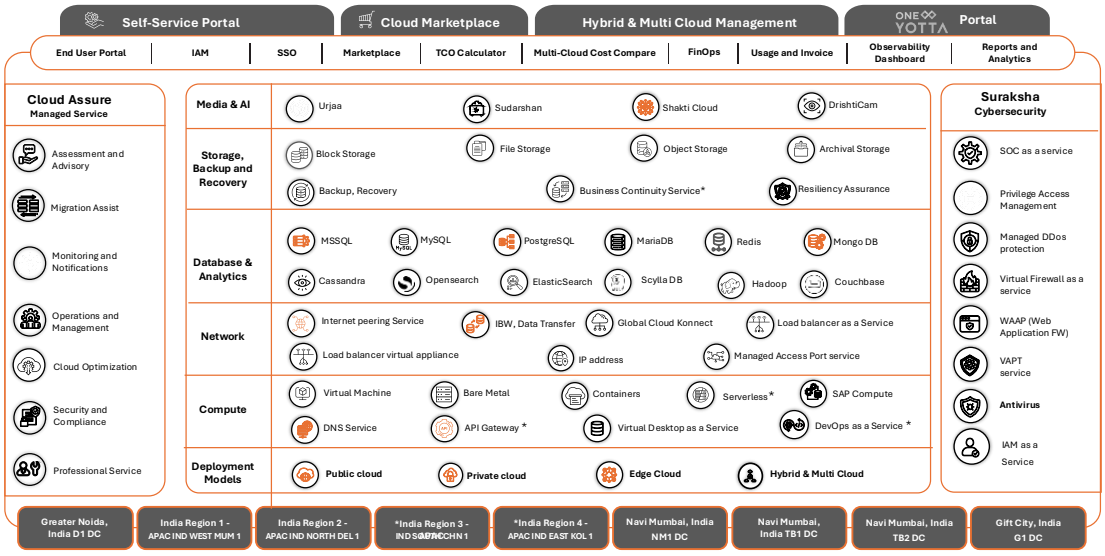
Real life Use Cases

Yntraa Virtual Desktop as a Service (vDaaS) supports a wide range of industry and

operational scenarios where secure, scalable, and remote desktop access is essential.

- **Call Centers and BPO/KPO Operations**: Enable high-volume, secure, and centrally managed virtual desktops for distributed agents.
- **Remote and Hybrid Work Environments**: Provide employees with seamless access to enterprise applications and data from any device, anywhere.
- **Banking and Financial Institutions**: Ensure compliance, data protection, and secure application delivery for regulated workloads.
- **Temporary and Contract Workforce**: Quickly provision and revoke desktops for short-term employees or external collaborators.
- **Branch and Regional Offices**: Maintain consistent performance and policy enforcement across multiple locations.
- **Students and e-Learning Platforms**: Deliver cloud-based virtual labs and desktop environments for remote education and training.
- **Traveling and Field Executives**: Enable mobile access to critical business applications with enterprise-grade security.
- **Media and Entertainment Professionals**: Support creative workloads that require remote access to high-performance computing and collaboration tools.

Service Portfolio



Service Support and SLA

The 24x7 Support Desk provides a central point of contact between customers and our cloud operations team. It encompasses a range of services reaching beyond the typical Help Desk, including:

- Ability to process incidents and complaints.
- Process Change and Service Requests using IT service management processes, i.e.,

Release Management, Configuration Management, Problem Management, etc.

- Call & Ticket Management functions.
- Our Support Desk encompasses Call Centre and Help Desk Activities, shortening the incident life cycle efficiently.

We have a strong team of highly skilled, experienced project managers who have implemented complex projects. They provide Customers with value-added benefits such as risk management, clear communication, and greater visibility throughout the project life cycle.

Yntraa provides basic level support (**Foundation Plan**) at no additional charge for the Cloud Services or Customer can select available fee-based technical support offerings with a specified minimum commitment and charges.

Any selected fee-based technical support offerings will be associated with and charged based on the level of use of the eligible Cloud Service, including any overage charges. Further details on support offerings can be found at **https://cloudassure/docs/get-supportplans**.

Customer may submit a support ticket describing an issue in accordance with the applicable support policy procedures. The support policies are available in the Cloud documentation and provide details of available support options, as well as information on access, support business hours, severity classification, and support resources and limitations. YNTRAA uses commercially reasonable efforts to respond to support requests; however, there is no specified response time objective for basic level support.

Unless otherwise agreed in writing, support is available only to Customer (and its authorized users) and not to any end users of Customer's solutions. Customer is solely responsible for providing all customer support and services to its end users.

Support for Non-Yntraa Products is provided by the third-party vendor and may require a separate support contract.

Service Level Agreements

The following Service Level Agreements (SLAs) apply to all Cloud Services where Yntraa is identified as the 'Provider' in the Yntraa Cloud Catalog. For 3rd party services, the SLA, if provided, will be set out in the 3rd party vendor terms for that service. SLA credits are Client's exclusive remedy for Yntraa's failure to meet a specified service level.

Yntraa will validate SLA claims based upon information provided by Client and Yntraa system records and will notify Client of approved credits via the Cloud UI or email. Yntraa's reasonable determination of a credit is final. Customer agrees to continue to make payment in full for Cloud Services while an SLA claim is being reviewed.

Service level agreements (SLAs) for Cloud Services are described in the Service Level

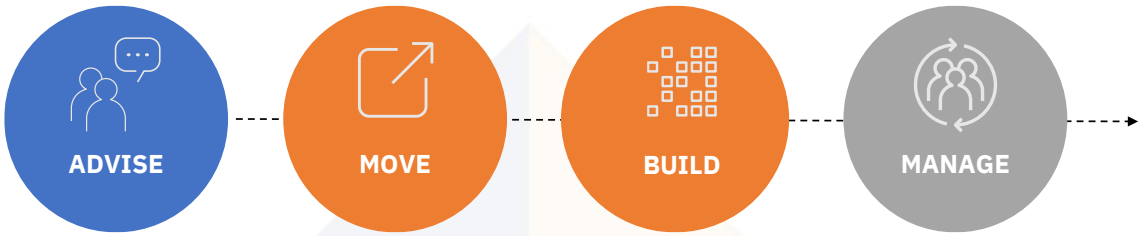
Agreement document, please refer Cloud and **Cloud Assure Service SLA document** for details.

Service Transition and Migration

Service Transition and Migration refer to the processes involved in moving services from a current operational state to a new or updated environment—such as transitioning from a legacy system to a modern platform or migrating from on-premises infrastructure to the cloud. This is a critical phase in the IT Service Management (ITSM) lifecycle, often aligned with ITIL (Information Technology Infrastructure Library) best practices.

At Yntraa cloud, we understand the importance of this transition phase. Our specialists, guided by industry standards and proven methodologies, ensure that new or modified services are seamlessly integrated into operations with minimal disruption—delivering value, stability, and continuity to your business.

Our Standard Approach



Service Certification & Accreditation

Yntraa Cloud is dedicated to delivering a secure, reliable, compliant and trusted cloud environment. To uphold these standards, Yntraa has obtained a wide range of certifications and accreditations, reflecting its adherence to international security standards and industry best practices. These credentials not only demonstrate Yntraa's commitment to robust data protection and service reliability but also assist customers in meeting their own regulatory and compliance obligations across various industries. Certifications and accreditations are highlighted below.

- **ISO/IEC 20000-1:2018**: Certifies its capability to manage **IT service management systems**, ensuring effective delivery of managed IT services in alignment with business objectives.
- **ISO 9001:2015**: Demonstrates the commitment to maintaining a h**igh level of quality in its service delivery processes,** ensuring customer satisfaction and continuous improvement.
- **ISO/IEC 27001:2013**: This certification ensures that it maintains a robust **Information Security Management System (ISMS)**. It certifies its ability to protect

sensitive information and meet international security standards.

- **ISO/IEC 27017:2015 (Cloud Security)**: Focuses on the additional security controls required for cloud services, ensuring a secure cloud environment for its customers.
- **ISO/IEC 27018:2019 (PII Protection)**: Ensures the protection of Personally Identifiable Information (PII) within the cloud. This certification demonstrates Yntraa's commitment to safeguarding customer data privacy.
- **PCI-DSS (Payment Card Industry Data Security Standard):** Yotta's data centers are certified to store and process payment card data in compliance with the rigorous PCI-DSS standards, ensuring secure handling of sensitive financial information.
- **ISO 14001:2015**: Yntraa adheres to international environmental management standards, showcasing its commitment to sustainable and environmentally friendly practices.
- **ISO 45001:2018 (Occupational Health and Safety)**: Reflects Yotta's commitment to ensuring the health and safety of its workforce while delivering services to its customers.
- **MEITY Empanelment: Yotta's data** centers are empaneled by the Ministry of Electronics and Information Technology (MEITY), allowing government bodies and public sector enterprises to host their cloud services in a compliant and secure environment.
- **Tier IV Certification**: Yotta operates Tier IV data centers, providing the highest level of fault tolerance and redundancy. This ensures a reliable and uninterrupted service with 99.995% uptime.
- **Open IX (OIX-2) Certification**: This certification attests that Yotta's data center facilities meet the stringent infrastructure, and operational standards required by the Open IX community for interconnection and data transmission.
- **Hyperscale Innovation in Automation**: It was recognized for its leadership in delivering automated, scalable cloud services.
- **Excellence in Datacenter**: This award acknowledges Yotta's innovative approach to data center architecture and service delivery.
